CAUTION: This power module is not internally fused. An input line fuse must always be used.

APPLICATION CIRCUIT

CHARACTERISTIC CURVE

FUSE CONSIDERATION

This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture.

To maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse.

The input line fuse suggest as below :

Model	Fuse Rating (A)	Fuse Type
PSR1.0-1P2	0.63	Slow-Blow
PSR1.0-1P5 、 PSR1.0-1P8	0.8	Slow-Blow
PSR1.0-2P5 、 PSR1.0-3P3 、 PSR1.0-6P5 、 PSR1.0-9P0	1.25	Slow-Blow
PSR1.0-5P0 、 PSR1.0-012 、 PSR1.0-015	1.6	Slow-Blow

THERMAL CONSIDERATIONS

The power module operates in a variety of thermal environments.

However, sufficient cooling should be provided to help ensure reliable operation of the unit.

Heat is removed by conduction, convection, and radiation to the surrounding Environment.

Proper cooling can be verified by measuring the point as the figure below.

The temperature at this location should not exceed 100°C.

When Operating, adequate cooling must be provided to maintain the test point temperature at or below 100°C.

Although the maximum point Temperature of the power modules is 100°C, you can limit this Temperature to a lower value for extremely high reliability.

The unit will shutdown if the internal IC junction exceeds 150°C (typical), but the thermal shutdown is not intended as a guarantee that the unit will survive temperature beyond its rating. The module will automatically restart after it cools down.
