Self-powered Totalizer New H7E

CSM_H7E_-N_DS_E_9_3

Compact Economical Totalizer with High Visibility Available with Backlit LCD Display

- Large display with 8.6-mm character height.
- Includes new models with backlight for improved visibility in dimly lit places. (Requires 24-VDC power supply.)
- Black and light-gray cases now available.
- PNP/NPN universal DC voltage input types now available.
- Battery is replaceable for Totalizer reuse and conservation of the environment.
- Key-protect switch to prevent faulty reset key operation.
- Dual operation mode.
- Front face compatible with NEMA4/IP66.
- Short body, all models have a depth of 48.5 mm.
- Finger protection terminal block conforms to VDE0106, Part100.
- · Conforms to UL, CSA, and CE marking. Conforms to EN61010-1 (pollution degree 2/overvoltage category III.)
- Conforms to EMC standards and EN61326, thus allowing use in residential, commercial and light- and heavy-industry environments.
- Six-language instruction manual provided.
- PCB-mounting models available. (Requires 3-V power supply.)

■ Broad Line-up of the New H7E Series

New H7E

Total Counter 8-digit

New H7ET

Time Counter

- 999999.9h/ 3999d23.9h
- 999h59min59s/ 9999h59.9min

New H7ER

Tachometer

- 1,000 s⁻¹ with 1 pulse/rev. encoder
- 1,000.0 s⁻¹ with 10 pulse/rev. encoder
- 1,000 min⁻¹ with 60 pulse/rev. encoder
- 10.000 min⁻¹ with 60 pulse/rev. encoder
- 1,000.0 min⁻¹ with 600 pulse/rev. encoder

PCB-mounting Counter

Self-powered Total Counter New H7EC

- Eight-digits, counting range 0 to 99999999.
- Dual input speed: 30 Hz \longleftrightarrow 1 kHz (except for AC/DC multivoltage input models)

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Model Number Structure

■ Model Number Legend

Note: Some configurations are not available.

1. Count Input

None: No-voltage input

V: PNP/NPN universal DC voltage input

FV: AC/DC multi-voltage input

2. Case Color None: Light gray

B: Black

3. Display

None: 7-segment LCD without backlight H: 7-segment LCD with backlight

Note: Estimates can be provided for coatings and other specifications that are not given in the datasheet. Ask your OMRON representative for details.

Ordering Information

H7EC Total Counter

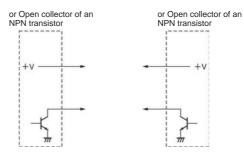

PNP/NPN Universal DC Voltage Input Model With Backlight

1. Contact Input (Input by a Relay or Switch Contact)

2. Solid-state Input

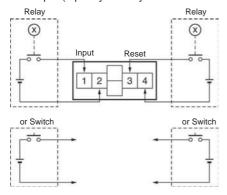

Note: 1. Terminals 2 and 4 (input circuit and reset circuit) are functionally isolated.

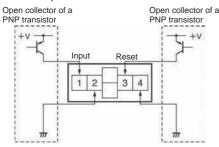

2. Select input transistors according to the following: Dielectric strength of the collector $\geq 50~\text{V}$ Leakage current < 100 μA

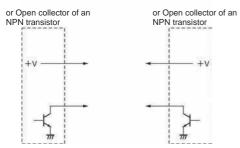

PNP/NPN Universal DC Voltage Input Model Without Backlight

1. Contact Input (Input by a Relay or Switch Contact)

2. Solid-state Input

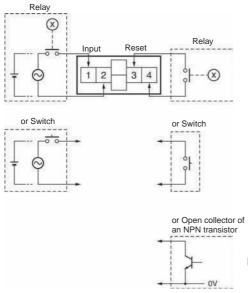

Note: 1. Terminals 2 and 4 (input circuit and reset circuit) are functionally isolated.

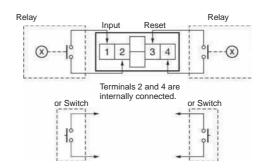

2. Select input transistors according to the following:
Dielectric strength of the collector ≥ 50 V
Leakage current < 100 μA

AC/DC Multi-voltage Input Model

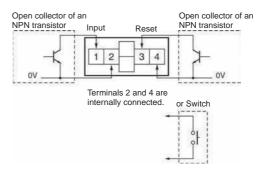

No-voltage Input Model

1. Contact Input (Input by a Relay or Switch Contact)

Note: Use Relays and Switches that have high contact reliability because the current flowing from terminals 1 or 3 is small. It is recommended that OMRON's G3TA-IA/ID be used as the SSR.

Solid-state Input
 (Open Collector Input of an NPN Transistor)

Note: 1. Residual voltage in the output section of Proximity Sensors or Photoelectric Sensors becomes less than 0.5 V because the current flowing from terminals 1 or 3 is small thus allowing easy connection.

2. Select input transistors according to the following: Dielectric strength of the collector \geq 50 V Leakage current < 1 μ A

Note: Select input transistors according to the following: Dielectric strength of the collector $\geq 50 \text{ V}$ Leakage current < 1 μA

Operation

■ Operating Modes

Incrementing Operation (Up)

Reset

Count input

(Full-scale (Full-scale 1) 3

Nomenclature

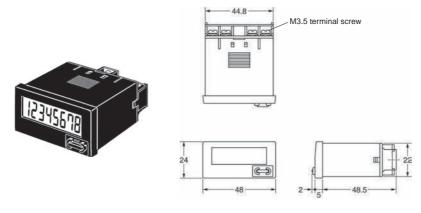

Note: 1. Perform switch setting before mounting to a control panel.

- 2. If the counting speed setting is changed, the present value will not be held. Press the Reset Key on the front panel.
- 3. Key protection is used to prohibit operating the Reset Key. The reset input terminals will still be functional.

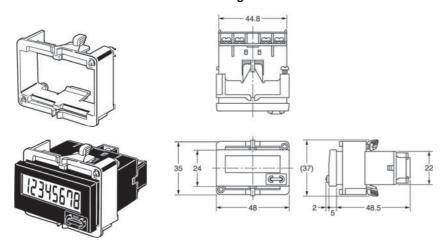

Dimensions

Note: All units are in millimeters unless otherwise indicated.

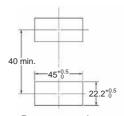

H7EC-N

Dimensions with Y92F-34 Flush Mounting Bracket

Panel Cutout Separate mounting

Dense mounting

Waterproofing is not possible for dense mounting

- When mounting, insert the Counter into the cutout, insert the adapter from the back and push in the Counter while making the gap between the front panel and the cutout panel as small as possible. Use screws to secure the Counter. If waterproofing is desired, insert the waterproof packing.
- When several Counters are installed, ensure that the ambient temperature will not exceed specifications.
- The appropriate thickness of the panel is 1 to 5 mm.

Note: A Compact Flush Mounting Bracket (Y92F-35) can also be used. Refer to Accessories for details.

Self-powered Time Counter New H7ET

- Seven digits, time range 0 to 3999d23.9h.
- Dual time range: 999999.9 ←→ 3999d23.9h or 999h59m59s \longleftrightarrow 9999h59.9m

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Note: All units are in millimeters unless otherwise indicated.

H7ER-N

Dimensions with Y92F-34 Flush Mounting Bracket

Panel Cutout Separate mounting

Waterproofing is not possible for dense mounting

- When mounting, insert the Counter into the cutout, insert the adapter from the back and push in the Counter while making the gap between the front panel and the cutout panel as small as possible. Use screws to secure the Counter. If waterproofing is desired, insert the waterproof packing.
- When several Counters are installed, ensure that the ambient temperature will not exceed specifications.
- The appropriate thickness of the panel is 1 to 5 mm.

Note: A Compact Flush Mounting Bracket (Y92F-35) can also be used. Refer to Accessories for details.

Connections

■ Terminal Arrangement

■ Connections

Power Supply and Battery Connections

Battery Connections

When designing a circuit, keep the power wiring connections shorter than 50 mm. Refer to the connection diagram above for the proper wiring polarity.

The life expectancy of a battery power supply can be calculated by the following formula:

 $t = A/I_c$

Where.

t: Life expectancy of battery (h)

A: Battery capacity (mAh)

I_c: H7E□-N□P current consumption (mA)

Example:

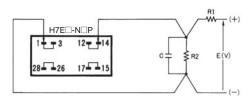

Battery life when using a 3-V lithium battery with a capacity of 1,200 mAh for the H7E \square -N \square P.

 $t = 1,200 \text{ [mAh]}/20 \times 10^{-3} \text{ [mA]} = 60,000 \text{ hours (approx. 6.8 years)}$

The battery capacity varies depending on the type of battery used; oxidized silver, mercury, or lithium battery.

Voltage Division of Power Supply Circuit

When necessary, the voltage from the battery may be divided by resistances:

When doing so, however, ensure that the following equation balances:

$$E(V) \times R_2 / (R_1 + R_2) = 3 V$$

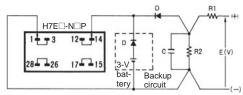

| R | E | | |
|----------------|------|--------|--------|
| | 5 V | 12 V | 24 V |
| R ₁ | 2 kΩ | 9.1 kΩ | 33 kΩ |
| R ₂ | 3 kΩ | 3 kΩ | 4.7 kΩ |

Allow a current high enough to flow through R_1 so that the H7E \square - $N\square P$ receives sufficient current.

C is a film capacitor, of about 0.1 $\mu\text{F},$ and is intended to absorb noise induced by the power lines.

Keep the wiring between the H7E \square -N \square P and R₂ or C as short as possible (within 50 mm).

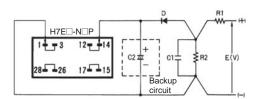

Backup Circuit for Protection Against Power Failure

Use a diode (D) having a forward voltage as small as possible (0.1 V max. at IF of 20 $\mu A).$

Determine the ratio of R_1 to R_2 in accordance with the forward voltage of the diode to be used. Be aware that when the power supplied to the H7E \square -N \square P has dropped to less than the voltage of the backup circuit, the battery will discharge.

To protect the circuit against a momentary power failure, an aluminum electrolyte capacitor can be used in place of a battery, as shown below:

When a capacitor is used, its backup time can be calculated by the following formula:

$$t = C (V_1 - V_2) / I_c$$

Where,

t: Backup time (s)

C: Capacitance (µF)

V₁: Supply voltage before power failure (V)

V₂: Minimum operating voltage of H7E□-N□P (V)

I_c: H7E□-N□P current consumption (μA)

Example:

Backup time by an aluminum electrolytic capacitor of 100 μ F. (Minimum operating voltage of H7E \square -N \square P is 2.6 V.)

t = 100
$$\mu$$
F \times (3–2.6 V)/20 μ A = 100 \times 0.40/20 = 2.0 seconds

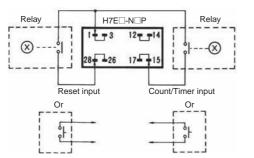

Note that the above calculation provides an approximate value, which varies depending on the environment under which the Counter is used and also on the type of capacitors used. Provide some allowance in selecting capacitors.

Keep the wiring between the H7E \square -N \square P and R₂ or C as short as possible (within 50 mm).

Input Connections

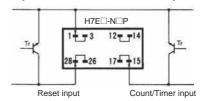

Input Connection Contact Input

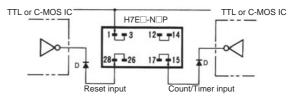

When the H7EC-NP is used, relay chattering may be counted. Use the H7EC-NLP, one of the low-speed input models.

Solid State Input

Open-collector Transistor Input

TTL or C-MOS IC Input

Use a transistor for input that satisfies the following conditions: Collector breakdown voltage $\geq 50~\text{V}$

Leakage current < 1 μA

Use a diode (D) having a forward voltage as small as possible (0.1 V max. at I_F of 20 μ A).

Accessories (Order Separately) (Common)

■ New H7E (Except for PCB-mounting Counter)

The New H7E models are supplied with a mounting bracket (Y92F-34) and nut. Additionally, the Y92F-75/-76/-77B Flush Mounting Adapters shown here allow the New H7E models to be fitted to existing panel cutouts.

Y92F-35 Compact Flush Mounting Bracket

2.4 18.6 4 4 Single mounting Dense mounting (48 × No. of units - 2.5) 5 5 22.2 5 5 22.2 5 5

Degree of protection (front): IP40 (not waterproof)
The DIP switch of the H7E□-N can be operated in mounted condition. Vibration resistance and shock resistant are the same level as the H7E□-N series.

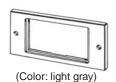

- The minimum mounting interval is 30 mm.
 Note: An interval of 40 mm is recommended for easier wiring.
- Do not allow the ambient temperature of the H7E□-N to exceed the specifications (55°C).

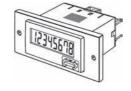

Panel Cutout

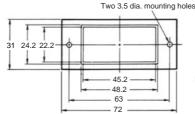

• Mounting is possible onto panels with a thickness of 1 to 5 mm.

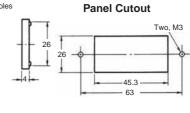

192F-75 Flush Mounting Adapter for 26 × 45.3 Rectangular Cutout

Use mounting bracket supplied with the Counter

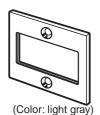

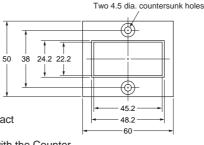

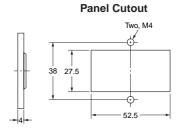

Y92F-76 Flush Mounting Adapter for 27.5×52.5 Rectangular Cutout

Use the Y92F-76 together with the Y92F-35 Compact Flush Mounting Bracket.

Do not use the Flush Mounting Adapter supplied with the Counter.

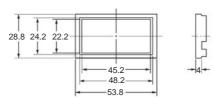

Y92F-77B Flush Mounting Adapter for 24.8 × 48.8 Rectangular Cutout

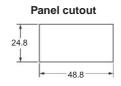

Use mounting bracket supplied with the Counter

(Color: light gray)

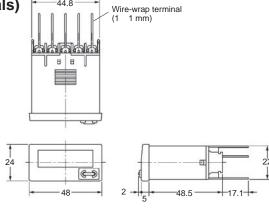

Note: The mounting panel thickness should be between 1 and 5 mm.

Y92S-37 Wire-wrap Terminal (Set of Two Terminals)

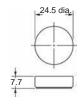

When using the Wire-wrap Terminal, be sure to use the correct wires and peripheral devices. (The correct wires, bits and sleeves are shown in the table on the right.)

| Wire | Bit | Sleeve | Wrapped state |
|-------|-----|--------|---------------|
| AWG22 | 2-A | 2-B | Normal |
| AWG24 | 1-A | 1-B | Normal |
| AWG26 | 3-A | 1-B | Normal |

Y92S-36 Lithium Battery (3 V)

Precautions (Common)

Refer to Safety Precautions for All Counters.

■ New H7E (Except for PCB-mounting Counter)

∕!∖ WARNING

This product has a built-in lithium battery. Do not short-circuit the + and – terminals, charge, disassemble, deform, or expose the battery to fire. The battery may explode (break), catch fire, or cause liquid leakage.

Do not use any battery other than the specified one (Y92S-36). Using another battery may cause liquid leakage or breakage, resulting in malfunction or injury.

∕!\ CAUTION

If a voltage other than the rated one is applied, internal elements may be damaged.

Do not use the Counter in the following places:

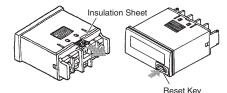

- · Locations subject to direct sunlight.
- · Locations subject to corrosive gases.
- Locations subject to dust.

Before Use

Be sure to remove this sheet before attempting to use the product.

 An insulation sheet has been inserted to maintain the quality of the Totalizer in the event of a long period without use. Be sure to remove this sheet before attempting to use the product.

Remove the insulation sheet and press the Reset Key on the front panel of the Counter. (With the H7ER-N,-NV(-H),-NV1(-H), models, "0" or "0.0" will be displayed after 1 s.)

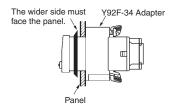

- Switch settings on the Counter must be performed before mounting it to a control panel.
- Do not use the Counter in the following locations:
 - Locations subject to severe changes in temperature.
 - Locations subject to condensation as the result of high humidity.

Mounting Precautions for Flush Mounting

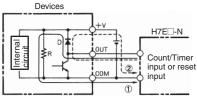

Although the operating section is watertight (conforming to NEMA4, IP66), rubber packing is provided to avoid water leakage through the gap between the Counter and panel cutout. Unless this rubber packing is tightly squeezed on, water may permeate inside the panel. Therefore, be sure to tighten the screws for fixing the Y92F-34 Flush Mounting Bracket. (Excessive tightening may also deform the rubber packing.)

Screw for the Flush Mounting Bracket

Reset Input and Count/Timer Input

The H7E operates using its built-in Battery. If the H7E is connected
to a device that has +V and OUT terminals that are connected with
a diode as shown in the circuit diagram, the circuit indicated by the
arrow 1 or 2 will be formed when the device is turned OFF. As a
result, the H7E may be reset or count by one. It is recommended
that such devices not be connected to the H7E.

- If an excessive voltage is applied to the count/timer input or reset input terminals, the internal elements may be damaged.
 Ensure that the following voltages are not exceeded:
 - PNP/NPN universal voltage input model: 30 VDC
 - AC/DC voltage input model:

At count/timer input: 240 VAC (peak voltage: 338V)

240 VDC

At reset input: No voltage can be applied. (No-voltage

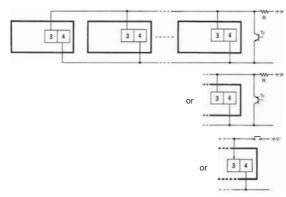

input)

- No-voltage input model: No voltage can be applied.
- Avoid wiring close to high-tension or large-current lines.
- Do not remove the outer case when voltage is being applied to the power supply terminals or the input terminals.
- The input for the H7E□-NFV-□ is a high-impedance circuit and so influence from an induced voltage may result in malfunction. Therefore, when the input signal wiring is longer than 10 m (line capacitance of 120 pF/m, at room temperature), it is recommended that a CR filter or a bleeder resistor is connected.

Count Input, Timer Input or Reset Input to More than One H7E Counter at a

Time

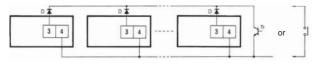

• PNP/NPN Universal DC Voltage Input

Note: H (Reset ON) level must be 4.5 V minimum.

$$H = \frac{4.7 (k\Omega)/N + V}{4.7 (k\Omega)/N + R}$$

No-voltage Input

Note: 1. The leakage current of the transistor used for input must be less than 1 μ A.

2. The forward voltage of the diode must be as low as possible (i.e., 0.1 V maximum with an IF of 20 μ A) so that the voltage between terminals 3 and 4 will be 0.5 V when the reset input is ON

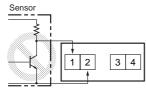

Input and Power Supply

No-voltage Input Models

 Do not impose voltage on the Counter if the Counter is a model that operates with no-voltage input, otherwise the internal circuit of the Counter may be damaged.

Do not connect any single input signal in parallel to Counter models operating with no-voltage input and those operating with voltage input, otherwise the Counters may malfunction.

 When connecting a sensor to the Counter that operates with novoltage input, make sure that the sensor has open collector output.

• When connecting an open collector input from a transistor to the Counter that operates with no-voltage input, make sure that the leakage current of the transistor is 1 µA maximum.

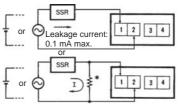

No-voltage Input and PNP/NPN Universal DC Voltage Input Models

 The operation of the Counter may be affected if the capacitance of input lines exceeds 500 pF (about 10 m, with parallel wires of 2 x 2 mm).

Keep all wires as short as possible. When using shielded wire, line capacitance may occur.

AC/DC Multi-voltage Input Models

 When connecting count/timer input from an SSR to the Counter that operates with AC/DC voltage input, use OMRON's G3TA-IA/ID SSR (for DC) whose leakage current is 0.1 mA max. or connect a bleeder resistor in parallel to the input circuit of the Counter.

*Bleeder resistor

The voltage between terminals 1 and 2 must be 1.5 V maximum when the SSR is OFF.

Backlight Power Supply

 To reduce variation in the brightness of the backlight when using more than one H7E with a backlight, use the same power supply for all the backlights.

 When connecting the DC power supply for the backlights, be sure to connect the polarities correctly.

Input Verification with the H7ET Time Counter

(When the time range is not set to 0s to 999h59min59s)

The decimal point of the LCD blinks every other second while an input signal is being applied. If the decimal point is not blinking, the input signal is not being received correctly. Check the input signal connections.

Unit Label for Time Counter and Tachometer

A unit label has been packed with the Counter. Use in accordance with the application.

Battery Replacement

Remove the wiring when replacing the Battery. Do not come in contact with any item to which high voltage is being applied. Doing so may result in electric shock.

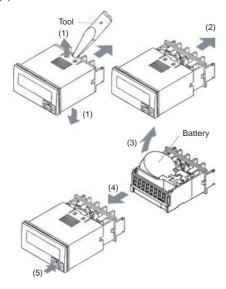

Before changing the Battery, the person should ensure that they are not carrying any static electric charge.

Procedure for replacing the Battery (refer to the diagrams below):

- 1. Using the tool, pry open the lift-tab on the case. (1)
- 2. Pull the body out of its outer case. (2)
- Lift the Battery up by the edge and remove it. (3) When removing the Battery, do not come in contact with the display area or any internal parts.
- 4. Wipe the back of the new Battery before inserting it.
- 5. Ensure that the + and terminals are correctly oriented.
- After replacing the Battery, re-insert the body into its case. (4) Check that the case is securely held in by the lift-tab.

 Press the Reset Key before use (not necessary for H7ER-N,-NV,-NV1). (5)

EN/IEC Standards

The count or timer input, reset input, and backlight power supply terminals of the no-voltage input or PNP/NPN universal DC voltage input models (H7E□-N,-N1, H7E□-NV(-H),-NV1(-H)) are not isolated.

A SELV power supply conforming to Appendix H of IEC61010-1 should be used for the count or timer input, reset input and backlight power supply terminals. A SELV power supply is a power supply for which the input and output have double or reinforced insulation, and for which the output voltage is 30 Vrms with 42.4 V peak or 60 VDC max. (Only the H7E \square -NV \square -H has a backlight.)

The terminals for count or timer input and reset input for AC/DC multi-voltage input models have basic insulation.

Connect the reset input terminals to a device that does not have exposed current-carrying parts and has basic insulation for 240 VAC.

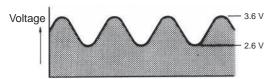

Others

If the indicator keeps flickering or is OFF, the internal battery may be close to the end of its service life. In such a case, it is suggested that the battery be replaced.

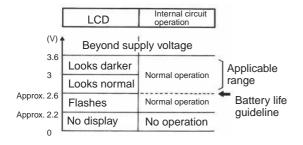

■ PCB-mounting Counter

Power Supply

 Use the power supply within the applicable range indicated by the following waveform, while considering the ripple and voltage fluctuations of the circuit power source.

 The H7E□-N□P changes its mode as shown below depending on the applied supply voltage.

Battery Replacement

To prevent unwanted reset when replacing the battery, connect the new battery before disconnecting the old one. Otherwise, the voltage supplied to the counter circuit drops, causing the present count value to reset

When designing the circuit board, providing two extra terminals for battery connection will make the switch must simpler. See the schematic diagram below:

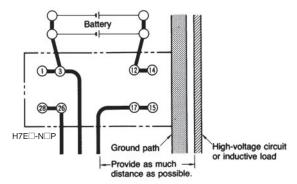

Wiring polarity must be carefully observed, in order to prevent permanent damage to the Counters. Exercise caution when inserting the Counter in the socket, to prevent reversed polarity.

Inputs

Do not route the wiring of the count, timer, or reset inputs in the vicinity of, or in parallel to the wiring of high-voltage or inductive load circuits (such as motors and relays). Also, keep the wiring as short as possible.

Be careful not to apply voltages exceeding the following values to the count, timer, or reset terminals, otherwise the internal circuit may be damaged.

No-voltage input: 3 VDC

General Information

Finish soldering under the conditions below.

Solder the terminals within 5 seconds, at a solder iron tip temperature of 250°C \pm 10°C when using lead solder, and within 3 seconds, at a solder iron tip temperature of 350°C \pm 10°C when using lead-free solder.

Since the Counter is not flux-tight, do not use flux when soldering.

Avoid automatic and dip soldering. Manually solder the Counter onto a PC board, and avoid cleaning as much as possible.

When mounting the Counter on a PC board with components which consume higher current than the H7E \square -N \square P, observe the following precautions.

- Minimize the wiring (less than 50 mm) from the H7E□-N□P to the power supply section.
- 2. Avoid placing the H7E□-N□P power, timer, counter, or reset input circuit in parallel with circuits that consume large currents, particularly on the positive side.

Placed far away from the power supply.

Power supply Power supply

When using the Counter in an environment where the Counter is subject to frequent occurrences of vibration or shock, or when mounting the Counter facing downwards or sideways, it is suggested that the Counter be directly soldered to a PCB instead of using sockets.

To Conform to EN/IEC Standards

Input terminals have no insulation from power supply terminals. The power supply terminals must be supplied from a SELV source in accordance with IEC61010-1 Annex H. SELV (separated extra-low voltage) source is a power supply having double or reinforced insulation between the primary and the secondary circuit and having output voltage of 30 V rms max. and 42.4 V peak max. or 60 VDC max.

Cleaning

To prevent damage, the exterior of the Counter must not be exposed to organic solvents (3.g. paint thinner or benzine), strong alkalis, or strong acids.

Others

- No user-serviceable parts.
- Return to OMRON for all repairs.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

In the interest of product improvement, specifications are subject to change without notice.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE

PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warrantv.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
