#### Current carrying capacity

The current carrying capacity of the connectors is limited by the thermal load capability of the contact element material including the connections and the insulating parts. The derating curve is therefore valid for currents which flow constantly (nonintermittent) through each contact element of the connector evenly, without exceeding the allowed maximum temperature.

Measuring and testing techniques acc. to IEC 60512-5-2

① Crimp termination

② Han-Quick Lock<sup>®</sup> termination

③ Solder termination

Conductor cross-section 2.5 mm<sup>2</sup>
