

SN75468, SN75469

SLRS023E - DECEMBER 1976-REVISED JANUARY 2015

# **SN7546x Darlington Transistor Arrays**

#### **Features**

- 500-mA Rated Collector Current (Single Output)
- High-Voltage Output 100 V
- **Output Clamp Diodes**
- Inputs Compatible With Various Types of Logic
- Relay Driver Applications
- Higher-Voltage Versions of ULN2003A and ULN2004A, for Commercial Temperature range

## Applications

- **Relay Drivers**
- **Hammer Drivers**
- Lamp Drivers
- Display Drivers (LED and Gas Discharge)
- Line Drivers
- Logic Buffers

## 3 Description

The SN75468 and SN75469 are high-voltage, highcurrent Darlington transistor arrays. Each consists of seven NPN Darlington pairs that feature high-voltage outputs with common-cathode clamp diodes for switching inductive loads. The collector-current rating of each Darlington pair is 500 mA. The Darlington pairs may be paralleled for higher current capability. Applications include relay drivers, hammer drivers, lamp drivers, display drivers (LED discharge), line drivers, and logic buffers.

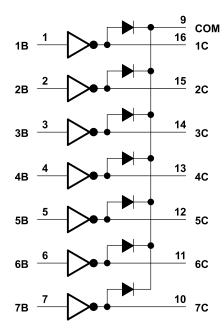

The SN75468 has a 2700-Ω series base resistor for each Darlington pair for operation directly with TTL or 5-V CMOS. The SN75469 has a 10.5-k $\Omega$  series base resistor to allow its operation directly with CMOS or PMOS that use supply voltages of 6 to 15 V. The required input current is below that of the SN75468.

#### Device Information<sup>(1)</sup>

# 6 Pin Configuration and Functions

SN75468 . . . D, N, OR NS PACKAGE SN75469 . . . D OR N PACKAGE

#### **Pin Functions**

PIN		TYPE	DESCRIPTION						
NAME	NO.	IIFE	DESCRIPTION						
<1:7>B	1 - 7	I	Channel 1 through 7 darlington base input						
<1:7>C	16 - 10	0	Channel 1 through 7 darlington collector output						
E	7	_	Common Emmitter shared by all channels (typically tied to ground)						
СОМ	8	I/O	Common cathode node for flyback diodes (required for inductive loads)						

## 7 Specifications

#### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN MAX	UNIT
$V_{CE}$	Collector-emitter voltage	100	V
VI	Input voltage (2)	30	V
	Peak collector current	500	mA
I <sub>OK</sub>	Output clamp current	500	mA
	Total emitter-terminal current	-2.5	Α
$T_J$	Operating virtual junction temperature	150	°C
T <sub>stg</sub>	Storage temperature range	<b>-</b> 65 150	°C

<sup>(1)</sup> Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### 7.2 ESD Ratings

				VALUE	UNIT
		Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins (1)	±2000		
	$V_{(ESD)}$	Electrostatic discharge	Charged device model (CDM), per JEDEC specification JESD22-C101, all pins (2)	±500	V

<sup>(1)</sup> JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

## 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	MAX	UNIT
V <sub>I</sub>	0	5	V
V <sub>CC</sub>	0	100	V
T <sub>J</sub> Junction Temperature	-40	125	°C

#### 7.4 Thermal Information

		SN7546x	
	THERMAL METRIC <sup>(1)</sup>	D	UNIT
		16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	73	
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	40.3	
$R_{\theta JB}$	Junction-to-board thermal resistance	38.9	°C/W
ΨЈТ	Junction-to-top characterization parameter	10.9	*C/VV
ΨЈВ	Junction-to-board characterization parameter	38.7	
R <sub>0</sub> JC(bot)	Junction-to-case (bottom) thermal resistance	N/A	

(1) For more information about traditional and new thermal metrics, see the IC Package Thermal Metrics application report, SPRA953.

<sup>(2)</sup> All voltage values are with respect to the emitter/substrate terminal E, unless otherwise noted.

<sup>(2)</sup> JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 7.5 Electrical Characteristics

 $T_A = 25$ °C (unless otherwise noted)

## 9 Detailed Description

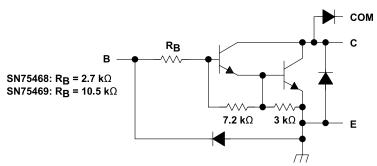

#### 9.1 Overview

This standard device has proven ubiquity and versatility across a wide range of applications. This is due to its integration of 7 Darlington transistors that are capable of sinking up to 500 mA and wide GPIO range capability.

The SN75468 comprises seven high voltage, high current NPN Darlington transistor pairs. All units feature a common emitter and open collector outputs. To maximize their effectiveness, these units contain suppression diodes for inductive loads. The SN75468 has a series base resistor to each Darlington pair, thus allowing operation directly with TTL or CMOS operating at supply voltages of 5.0 V or 3.3 V. The SN75468 offers solutions to a great many interface needs, including solenoids, relays, lamps, small motors, and LEDs. Applications requiring sink currents beyond the capability of a single output may be accommodated by paralleling the outputs.

This device can operate over a wide temperature range (-40°C to 105°C).

#### 9.2 Functional Block Diagram

All resistor values shown are nominal.

#### 9.3 Feature Description

Each channel of SN75468 consists of Darlington connected NPN transistors. This connection creates the effect of a single transistor with a very high current gain ( $\beta$ 2). This can be as high as 10,000 A/A at certain currents. The very high  $\beta$  allows for high output current drive with a very low input current, essentially equating to operation with low GPIO voltages.

The GPIO voltage is converted to base current via the 2.7 k $\Omega$  resistor connected between the input and base of the pre-driver Darlington NPN. The 7.2 k $\Omega$  & 3.0 k $\Omega$  resistors connected between the base and emitter of each respective NPN act as pull-downs and suppress the amount of leakage that may occur from the input.

The diodes connected between the output and COM pin is used to suppress the kick-back voltage from an inductive load that is excited when the NPN drivers are turned off (stop sinking) and the stored energy in the coils causes a reverse current to flow into the coil supply via the kick-back diode.

In normal operation the diodes on base and collector pins to emitter will be reversed biased. If these diode are forward biased, internal parasitic NPN transistors will draw (a nearly equal) current from other (nearby) device pins.

#### 9.4 Device Functional Modes

#### 9.4.1 Inductive Load Drive

When the COM pin is tied to the coil supply voltage, SN75468 is able to drive inductive loads and supress the kick-back voltage via the internal free wheeling diodes.

#### 9.4.2 Resistive Load Drive

When driving a resistive load, a pull-up resistor is needed in order for SN75468 to sink current and for there to be a logic high level. The COM pin can be left floating for these applications.

## 10 Application and Implementation

#### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

## 10.1 Application Information

SN75468 will typically be used to drive a high voltage and/or current peripheral from an MCU or logic device that cannot tolerate these conditions. The following design is a common application of SN75468, driving inductive loads. This includes motors, solenoids & relays. Each load type can be modeled by what's seen in Figure 16.

## 10.2 Typical Application

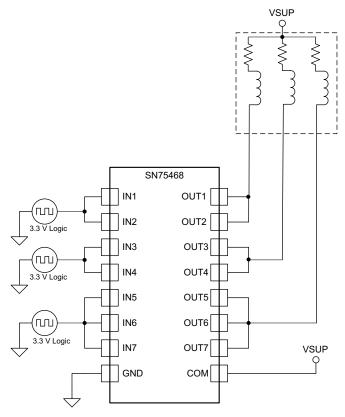

Figure 16. SN75468 as Inductive Load Driver

#### 10.2.1 Design Requirements

For this design example, use the parameters listed in Table 1 as the input parameters.

**Table 1. Design Parameters** 

DESIGN PARAMETER	EXAMPLE VALUE
GPIO Voltage	3.3 V or 5.0 V
Coil Supply Voltage	12 V to 100 V
Number of Channels	7
Output Current (R <sub>COIL</sub> )	20 mA to 300 mA per channel
Duty Cycle	100%

(2)

(3)

#### 10.2.2 Detailed Design Procedure

When using SN75468 in a coil driving application, determine the following:

- Input voltage range
- Temperature range
- Output and drive current
- Power dissipation

#### 10.2.2.1 Drive Current

The coil current is determined by the coil voltage (VSUP), coil resistance & output low voltage (V<sub>OL</sub> or V<sub>CE(SAT)</sub>).  $I_{COIL} = (V_{SUP} - V_{CE(SAT)}) / R_{COIL}$ 

#### 10.2.2.2 Output Low Voltage

The output low voltage  $(V_{OL})$  is the same thing as  $V_{CE(SAT)}$  and can be determined by the *Electrical* Characteristics table, Figure 1, or Figure 2.

#### 10.2.2.3 Power Dissipation & Temperature

The number of coils driven is dependent on the coil current and on-chip power dissipation. The number of coils driven can be determined by Figure 4 or Figure 5.

For a more accurate determination of number of coils possible, use the below equation to calculate SN75468 onchip power dissipation P<sub>D</sub>:

$$P_{D} = \sum_{i=1}^{N} V_{OLi} \times I_{Li}$$

Where:

N is the number of channels active together.

$$V_{OLi}$$
 is the OUT<sub>i</sub> pin voltage for the load current  $I_{Li}$ . This is the same as  $V_{CE(SAT)}$ 

In order to guarantee reliability of SN75468 and the system the on-chip power dissipation must be lower that or equal to the maximum allowable power dissipation (PD(MAX)) dictated by below equation Equation 3.

$$PD_{(MAX)} = \left(T_{J(MAX)} - T_{A}\right)_{\theta_{JA}}$$

Copyright © 1976-2015, Texas Instruments Incorporated

Where:

T<sub>J(MAX)</sub> is the target maximum junction temperature.

T<sub>A</sub> is the operating ambient temperature.

 $\theta_{JA}$  is the package junction to ambient thermal resistance.

It is recommended to limit SN75468 IC's die junction temperature to less than 125°C. The IC junction temperature is directly proportional to the on-chip power dissipation.

#### 10.2.3 Application Curves

The following curves were generated with SN75468 driving an OMRON G5NB relay –  $V_{in}$  = 5.0V;  $V_{sup}$ = 12 V &  $R_{COIL}$ = 2.8 k $\Omega$ 

## 10.3 System Examples

## 11 Power Supply Recommendations

This part does not need a power supply; however, the COM pin is typically tied to the system power supply. When this is the case, it is very important to make sure that the output voltage does not heavily exceed the COM pin voltage. This will heavily forward bias the fly-back diodes and cause a large current to flow into COM, potentially damaging the on-chip metal or over-heating the part.

#### 12 Layout

#### 12.1 Layout Guidelines

Thin traces can be used on the input due to the low current logic that is typically used to drive SN75468. Care must be taken to separate the input channels as much as possible, as to eliminate cross-talk. Thick traces are recommended for the output, in order to drive whatever high currents that may be needed. Wire thickness can be determined by the trace material's current density and desired drive current.

Since all of the channels currents return to a common emitter, it is best to size that trace width to be very wide. Some applications require up to 2.5 A.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

## PACKAGE OPTION ADDENDUM

www.ti.com 14-Aug-2021

- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

SOP

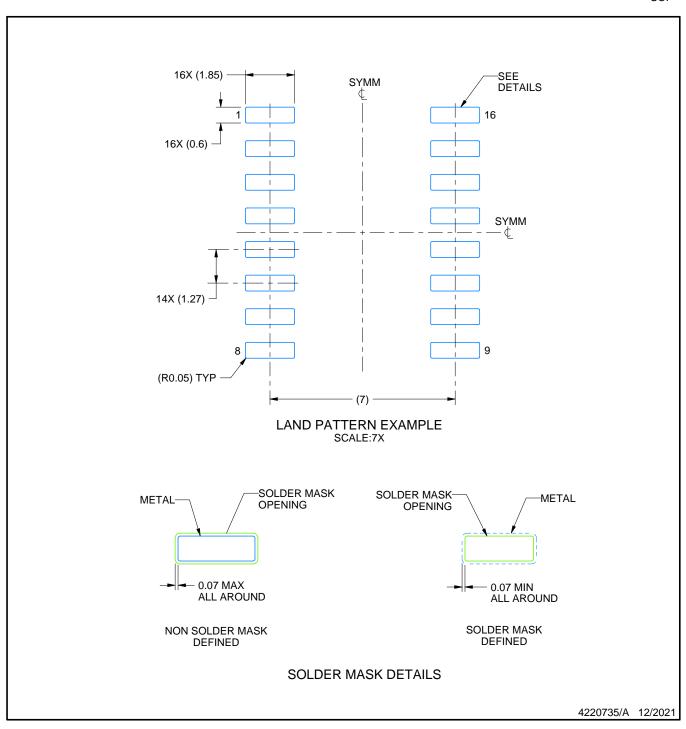

- 1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing
- per ASME Y14.5M.

  2. This drawing is subject to change without notice.

  3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
- 4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm, per side.

SOF

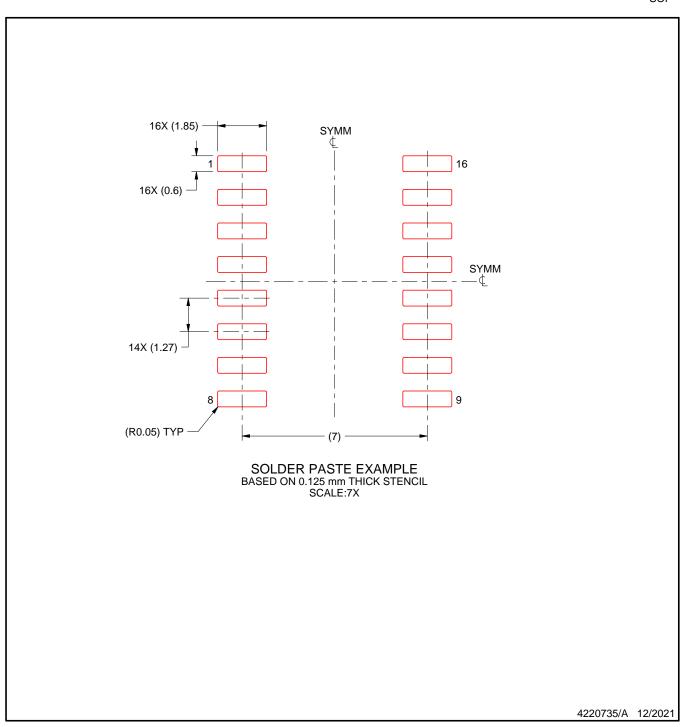

## NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOF

#### NOTES: (continued)

- 7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
- 8. Board assembly site may have different recommendations for stencil design.

# D (R-PDS0-G16)

## PLASTIC SMALL OUTLINE

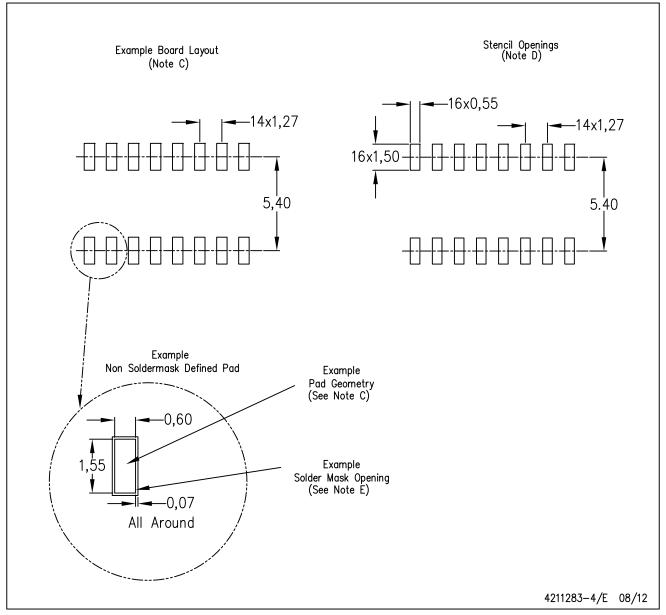

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AC.

# D (R-PDSO-G16)

# PLASTIC SMALL OUTLINE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Publication IPC-7351 is recommended for alternate designs.
- D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
- E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

## **MECHANICAL DATA**

## NS (R-PDSO-G\*\*)

# 14-PINS SHOWN

## PLASTIC SMALL-OUTLINE PACKAGE

- A. All linear dimensions are in millimeters.
- B. This drawing is subject to change without notice.
- C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

# N (R-PDIP-T\*\*)

## PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
- The 20 pin end lead shoulder width is a vendor option, either half or full width.
