PRODUCT OVERVIEW

The PMA-183PLN+ is a PHEMT* based wideband MMIC amplifier with an unique combination of high gain with positive gain slope, high directivity and low noise figure, making it ideal for receiver applications. This design operates on a single 2.6V supply, is well matched for 50Ω and comes in a tiny, low profile package (3.5 x 2.5 mm, 16-lead MCLP), accommodating dense circuit board layouts.

KEY FEATURES

Feature	Advantages
High Directivity	With active directivity of 33 dB, the PMA-183PLN+ is an excellent choice for buffering broadband circuits, eliminating the need for an expensive isolator in most cases.
Positive Gain Slope vs. Frequency • +0.21 dB/GHz (6-15 GHz) • +0.55 dB/GHz (15-18 GHz)	Useful for compensating negative gain slope of most wideband microwave components and eliminating the need for equalization
Excellent Noise Figure up to 18 GHz • 1.2dB Typ. at 18GHz	Enables lower system noise figure performance.
3.5 x 2.5mm, 16-lead MCLP package	Tiny footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB.

4. Permanent damage may occur if any of these limits are exceeded.
