

COPPER TUBE-FIN HEAT EXCHANGERS
6000 SERIES

PRODUCT DESCRIPTION

Both the OEM Coils and 6000 Series copper tube-fin heat exchangers offer high performance and reliability. The 6000 Series heat exchanger has a different tube configuration, uses copper fin is painted black for corrosion resistance and includes a fan plate.

The 6000 Series is an attractive, high performance heat exchanger that delivers efficient heat transfer and maximum reliability in a compact package.

6000 SERIES FEATURES

- 6000 Series are engineered for performance. The seamless copper tubes are expanded into the fin with an extruded full collar that ensures excellent metal-to-metal contact to optimize thermal performance. Higher tube density results in maximum heat transfer.
- Our thick-walled (0.028"/0.7 mm) seamless copper tubing and fluxless silver-brazed joints ensure the integrity of the fluid path. Heat exchangers are pressure tested to 150 psi (10.3 bar) to guarantee reliability. Units are electro-static dip painted for long life even in corrosive or harsh environments.
- Compatible with water, Ethylene Glycol/Water (EGW) solutions, and other common coolants.

TECHNICAL DATASHEET

**COPPER TUBE-FIN HEAT EXCHANGERS
OEM COILS**

PRODUCT DESCRIPTION

The OEM Coils copper tube-fin heat exchangers offer high performance and reliability. The OEM Coils heat exchanger has aluminum fins and is unpainted with galvanized steel side plates.

OEM Coils are best suited for the price-sensitive customer in applications where the appearance of the heat exchanger is not critical, such as when the heat exchanger is hidden inside of the equipment.
