Multi-function SMARTimer

Type 84.02

- 1 CO (16 A) + 1 CO (16 A)
- 2 in 1: two independent channels
- Two supply version available: 12...24 V AC/DC and 110...240 V AC/DC (not polarized)
- Two programming modes: "Smart" mode via smartphone with NFC communication or "Classic" mode via the joystick
- Wide backlit display for easy reading all information during the programming phase and during normal operation
- Flexibility: possible to create new specific functions, mixing the 30 available functions on each channel
- High precision and possibility of choice in time set-up:
 - Time units: 0.1 seconds, seconds, minutes, hours
 - Set-time to 4 digits, anywhere between 000.1 second and 9999 hours
- Large display allows easy viewing: set time, current time, timing in progress, input command state, output state
- Two independent Start inputs - one per channel
- One common Reset input (select to apply to either, or both, channels)
- One common Pause input (select to apply to either, or both, channels)
- PIN to protect access to programming session
- Up or Down timing modes
- Type 84.02.0.024.0000: it's possible to directly connect timer input to proximity sensors (both PNP and NPN)
- 35 mm rail (EN 60715) mount

Screw terminal

For outline drawing see page 5

Contact specification

Contact configuration	2 CO (DPDT)	
Rated current/Maximum peak current	A	16/30
Rated voltage/		
Maximum switching voltage	V AC	250/400
Rated load AC1	VA	4000
Rated load AC15 (230 V AC)	VA	1000
Single phase motor rating (230 V AC)	kW	0.55
Breaking capacity DC1: 30/110/220 V	A	16/0.3/0.12
Minimum switching load	mW (V/mA)	300 (5/5)
Standard contact material	AgNi	

Supply specification

Nominal voltage (U_N)	V DC/AC (50/60 Hz)	12...24	110...240
Rated power AC/DC	VA (50 Hz)/W	2.2/1.2	4/1.6
Operating range	V DC/AC	10...30	90...264

Technical data

Specified time range	0.1s...9999h	
Repeatability	%	± 0.05
Recovery time	ms	40*
Minimum control impulse	ms	40
Setting accuracy	%	± 0.05
Electrical life at rated load in AC1	cycles	100 · 10 ³
Ambient temperature range	°C	-20...+50
Protection category		IP 20
Approvals (according to type)	   	

* Applies where timer function is controlled by an input to B terminal(s). Where power-off is used to reset the timer, the recovery time can increase up to 500 ms, depending on supply voltage.

84.02

2in1

- 2 CO 16 A output contacts
- Digital Timer "Two in one": two totally independent programmable channels, in a single product

Series _____

Type _____

0 = 2 Channel multi-function SMARTimer

Versions

0 = Standard

Supply voltage

230 = (110...240)V AC/DC (not polarized)

024 = (12...24)V AC/DC (not polarized)

Supply version

0 = AC (50/60 Hz)/DC

No. of poles

2 = 2 CO (DPST)

Technical data

Insulation

Dielectric strength	between input and output circuit	V AC	4000
	between open contacts	V AC	1000
	between input/output and display	V AC	2000

Insulation (1.2/50 µs) between input and output

kV

6

EMC specifications

Type of test	Reference standard	84.02.0.230	84.02.0.024
Electrostatic discharge	contact discharge	EN 61000-4-2	4 kV
	air discharge	EN 61000-4-2	8 kV
Radio-frequency electromagnetic field (80 ÷ 1000 MHz)		EN 61000-4-3	10 V/m
Fast transients (burst) (5-50 ns, 5 kHz) on Supply terminals		EN 61000-4-4	4 kV
Surges (1.2/50 µs) on Supply terminals	common mode	EN 61000-4-5	4 kV
	differential mode	EN 61000-4-5	4 kV
on start terminal (B1...B4)	common mode	EN 61000-4-5	2 kV
	differential mode	EN 61000-4-5	1.5 kV
Radio-frequency common mode (0.15 ÷ 80 MHz) on Supply terminals		EN 61000-4-6	4 kV
Radiated and conducted emission		EN 55022	2 kV
Other data		class B	class B

Current absorption on control terminals (B1...B4)

< 2.4 mA (0.230), < 5.5 mA (0.024)

Power lost to the environment	without contact current	W	1.6
	with rated current	W	3.6

Screw torque	Nm	0.8
Max. wire size	solid cable	stranded cable
	mm ²	1 x 6 / 2 x 4
	AWG	1 x 10 / 2 x 12
		1 x 12 / 2 x 14

Finder Toolbox for programming

Once the App FINDER Toolbox is downloaded and installed, you can read an existing program, or program your device with maximum flexibility, changing the smallest details and saving your program directly to your smartphone.

At this point you simply touch the time switch with the smartphone to transfer the data.

Finder Toolbox for reference

Finder Toolbox provides all technical data sheets and news from Finder.

Functions

Wiring diagram

**Type
84.02**

(OFF) Relay OFF.

The output contact stays permanently open.

(ON) Relay ON.

The output contact stays permanently closed.

(AI) On-delay.

Apply power to timer. Output contact transfers after preset time has elapsed. Reset occurs when power is removed.

(DI) Interval.

Apply power to timer. Output contact transfers immediately. After the preset time has elapsed, contact resets.

(GI) Pulse delayed.

Apply power to timer. Output contact transfers after time T_1 has elapsed. Reset occurs after time T_2 .

(LI) Asymmetrical flasher (starting pulse on).

Apply power to timer. Output contact transfers immediately and cycle between ON and OFF for as long as power is applied. The ON and OFF times are independently adjustable.

(PI) Asymmetrical flasher (starting pulse off).

Apply power to timer. Output contact transfers after time T_1 has elapsed and cycle between OFF and ON for as long as power is applied. The ON and OFF times are independently adjustable.

(SW) Symmetrical flasher (starting pulse on).

Apply power to timer. Output contact transfers immediately and cycle between ON and OFF for as long as power is applied. The ratio is 1:1 (time on = time off).

(SP) Symmetrical flasher (starting pulse off).

Apply power to timer. First transfer of contact occurs after preset time has elapsed. The timer now cycles between OFF and ON as long as power is applied. The ratio is 1:1 (time on = time off).

(AE) On-delay with control signal.

Power is permanently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which the output contact transfers and remains so until the power is removed.

(AC) On-delay with maintained control signal.

Power is permanently applied to the timer. Closing the Signal Switch (S) initiates the preset delay, after which the output contact transfers and remains so, until the Signal Switch (S) is opened. If the Signal Switch (S) opens during the timing, the function will reset.

(BE) Off-delay with control signal.

Power is permanently applied to the timer. The output contact transfers immediately on closure of the Signal Switch (S). Opening the Signal Switch initiates the preset delay, after which the output contact resets.

(DE) Interval with control signal on.

Power is permanently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contact transfers, and remain so for the duration of the preset delay, after which it resets.

(DC) Interval with maintained control signal.

Power is permanently applied to the timer. On closure of Signal Switch (S), the output contact transfers and remain so for the duration of the preset delay, unless the Signal Switch opens before the preset time has elapsed in which case the output contact resets immediately.

Functions

Wiring diagram

**Type
84.02**

(EE) Interval with control signal off.

Power is permanently applied to the timer. On opening of the Signal Switch (S) the output contact transfers, and remain so for the duration of the preset delay, after which it resets.

(FE) Interval with control signal on and off.

Power is permanently applied to the timer. Both the opening and the closing of the Signal Switch (S) initiates the transfer of the output contact (or extends the time). In both instances the contact resets after the preset delay has elapsed.

(EEa) Interval with control signal off (retriggerable).

Power is permanently applied to the timer. On opening of the Signal Switch (S) the output contact transfers, and remain so for the duration of the preset delay, after which it resets.

(EEb) Interval with control signal off.

Power is permanently applied to the timer. On opening of the Signal Switch (S) the output contact transfers, and remain so for the duration of the preset delay, after which it resets.

(WD) Watchdog

(retriggerable interval with control signal on).

Power is permanently applied to the timer. On momentary or maintained closure of Signal Switch (S), the output contact transfers, and remain so for the duration of the preset delay, after which it resets; subsequent closures of Signal Switch during the delay will extend the time. If the closure of the Signal Switch (S) is longer than the preset time (T) then the output contact resets.

(GE) Pulse delayed with control signal on.

Power is permanently applied to the timer. Closing the Signal Switch (S) initiates T1 delay, after which the output contact transfers. Reset occurs after T2 time.

(GC) Pulse delayed with maintained control signal.

Power is permanently applied to the timer. On closure of Signal Switch (S), the output contact will transfer after time T1 has elapsed. Reset occurs after T2 time. If the Signal Switch (S) opens during T1 /T2, the timing function/output contact will reset.

(LE) Asymmetrical flasher (starting pulse on) with control signal.

Power is permanently applied to the timer. Closing Signal Switch (S) causes the output contact to transfer immediately and cycle between ON and OFF, until opened.

(LC) Asymmetrical flasher (starting pulse on) with maintained control signal.

Power is permanently applied to the timer. On closure of Signal Switch (S), the output contact transfers immediately and cycles between ON and OFF for as long as the control signal is applied. The ON and OFF times are independently adjustable. After the Signal Switch (S) is opened, the output contact resets.

(PE) Asymmetrical flasher (starting pulse off) with control signal.

Power is permanently applied to the timer. Closing the Signal Switch (S) initiates delay T1 after which the output contact transfers and continues to cycle between OFF and ON, until the Signal Switch is opened.

Functions

Wiring diagram

	Type 84.02	 <p>(PC) Asymmetrical flasher (starting pulse off) with maintained control signal. Power is permanently applied to the timer. On closure of Signal Switch (S), the output contact transfers after time T1 has elapsed and cycles between OFF and ON for as long as the control signal is applied. The OFF and ON times are independently adjustable. After the Signal Switch (S) is opened, the output contact resets.</p>
		 <p>(CEb) On and off independent delays with control signal. Power is permanently applied to the timer. Closing the Signal Switch (S) initiates the preset delay T1, after which the output contact transfers. Opening the Signal switch initiates the preset delay T2, after which the output contact resets.</p>
		 <p>(IT) Timing step. Closing the Signal Switch (S) the output contact transfers and remains so after S opening, for the duration of the preset delay, after which it resets. During the timing period it is possible to immediate open the contact with a further impulse on S.</p>
		 <p>(SS) Monostable controlled by Signal switch. The output contact follows the status of Signal Switch (S).</p>
		 <p>(PS) Monostable controlled by Pause switch. The output contact follows the status of Pause Switch (P).</p>
		 <p>(SHp) "Shower" (off-delay with control signal and pause signal). Power is permanently applied to the timer. The output contact transfers immediately on closure of the Signal Switch (S). Opening the signal switch initiates the preset delay, after which the output contact resets. Closure of the Pause Switch (P) will immediately halt the timing process, but the elapsed time will be retained. During the pause, the output contact will be open. On opening of the Pause Switch, timing resumes from the retained value and the output contact will take the previous condition.</p>

PAUSE and RESET options

 <p>Ex. (AI) function</p>	 <p>(P) PAUSE option* Closure of the pause switch will immediately halt the timing process, but the elapsed time will be retained. The current state of the output contacts will be maintained. On opening of the pause switch, timing resumes from the retained value.</p>
	<p>(R) RESET option* For each and every function and time range, the timer is immediately reset when the reset switch is closed.</p>

* Select to apply to either, or both, channels.

Interfacing the SMARTimer with proximity PNP-NPN sensors

Wiring diagram

With PNP sensors

It is possible to directly connect the output of proximity sensors (either PNP or NPN types) to the inputs of the 24V version of the SMARTimer.

With NPN sensors
