

54mm Front End DC-DC Power Converter

FEATURES

- 1200W output power (no derating across the full DC input voltage range)
- 1.57"(1U) x 12.65" x 2.15"
- 92% efficiency
- 12VDC Main output
- 3.3VSB or 5VSB output (20W)
- >28W/in³ power density
- N+1 Redundancy Capable; hot plug/swap (up to 8 modules in parallel)
- Active current sharing on 12V main output; integral MOSFET ORING;
- Over-Voltage, Over-Current; Over-Temperature Protection
- Internal variable speed cooling fan
- PMBus™ Power Management Bus
- RoHS Compliant

PRODUCT OVERVIEW

The D1U54-D-1200-12-HxxPC series are highly efficient 1200 watt, DC input front end modules with a 12V main output and a choice of 3.3V or 5V (20W) standby rails. The power module is able to current share with up to eight (8) other power modules of the same type operating in parallel or N+1 redundancy. The supplies may be hot plugged, and include integral isolation devices.

The power modules are fully protected from overload and overvoltage and are able to auto-recover from overtemperature faults. A Status LED is provided on the front panel and additional control and status reporting is provided by hardware logic signals and via a PMBus™ digital interface.

A low profile sub 1U height enclosure provides an excellent power density of >28W/in³ that is ideal for delivering reliable, efficient power to servers; workstations; storage systems and other 12V distributed power systems, including direct operation from intermediate bus converters.

ORDERING GUIDE

Model Number	Power Output	Main Output	Standby Output	Airflow

PROTECTION CHARACTERISTICS						
Output Voltage	Parameter	Conditions	Min.	Typ.	Max.	Units
N/A	Over-Temperature	Air inlet temperature; Auto re-start	60	65	70	°C
	Over-Voltage	Latching; toggle PS_ON or recycle DC input to reset	13		14	V
12V (Main)	Over-Current	For slow over-current events, a constant current will be sustained for 1sec followed by a latch off that will reset after 5secs. For hard (short circuit) events the output will shutdown within 50ms and autorestart within 200ms. This cycle will be repeated 10 times after which point the output will permanently latch off. The power module will require reset by recycling the incoming DC source or toggling PS_ON.	115		135	A
3.3VSB	Over-Voltage	Latching; toggle PS_ON or recycle DC input to reset	3.6		4.0	V
	Over-Current	Shutdown followed by auto-recovery	6.5		8.5	A
5VSB	Over-Voltage	Latching; toggle PS_ON or recycle DC input to reset	5.4		6.0	V
	Over-Current	Shutdown followed by auto-recovery	4.5		5.5	A

CURRENT SHARING NOTES

1. Main 12VDC Output: Analogue active share bus. The ISHARE bus (Pin B5 or D4) must be connected on all sharing modules. It is not required that the SENSE signals are connected to the remote load for current share to operate correctly.
2. Up to eight (8) power modules can be connected in parallel (non-redundant) or N+1 configuration. The current share bus is analogue bi-directional (can source or sink current from the ISHARE bus). The voltage of the bus would measure approximately 8VDC for a single power module at 100% load; for two (2) modules sharing a common load the ISHARE bus voltage would be approximately 4V for a perfect 50/50 current share scenario.
3. The VSB (Standby Output) output of the power module can also be connected in parallel; internal output isolation devices are provided however the combined available power is limited to that available from a single power module (3.3V or 5V; 20W) irrespective of the number of modules connected in parallel.

MECHANICAL DIMENSIONS

Notes

1. Dimensions: 1.57" x 12.66" x 2.15" (40.0 x 321.5mm x 54.5mm)
2. Safety earth/ground connection via separate dedicated M4 pan head screw connection (located above terminal block)
