

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

General Description

The MAX2551 is a complete single-chip RF-to-bits and bits-to-RF radio transceiver. This device is in compliance with the 3GPP TS25.104 femtocell standard for Band II and V. It's equipped with multiple receive inputs and transmit outputs for low band, high band, and macro-cell monitoring (Table 1).

This fully integrated transceiver facilitates compact radio designs for dongle and standalone femtocell products by minimizing external component count. Maxim's MAX-PHY serial interface is used to drastically reduce IC pin count, while worldwide field-proven architecture accelerates time to product deployment.

The device features unparalleled receive blocker performance and the industry's lowest noise figure for higher data rates and range. Low-power operational modes are available to minimize power consumption. The transmitter is designed to deliver EVM far exceeding the standard requirement at 0dBm.

The MAX2550–MAX2553 is a family of pin-compatible transceivers to cover all major WCDMA and cdma2000® bands. All parts are controlled by a 4-wire interface.

The MAX2551 is packaged in a compact 7mm x 7mm TQFN and specified over the -40°C to +85°C extended temperature range. A complete radio reference design is available to facilitate custom designs.

Applications

WCDMA Band II and V Femtocells

[Simplified Block Diagram](#) appears at end of data sheet.

[Ordering Information](#) appears at end of data sheet.

cdma2000 is a registered service mark of
Telecommunications Industry Association.

Benefits and Features

- ◆ Single-Chip Femtocell Radio Transceiver
- ◆ WCDMA/HSPA+ Band II and V Operation
- ◆ TS25.104 Standard Compliant
- ◆ Multiple LNA Inputs for WCDMA, PCS, and GSM Macrocell Monitoring
- ◆ High Level of Integration
 - ✧ On-Chip Fractional-N Frequency Synthesizers for LO Generation
 - ✧ No Tx SAW Filters Required
 - ✧ Integrated PA Drivers for Lower-Cost Power Amplifier Designs
 - ✧ 12-Bit AFC DAC to Control TCXO
 - ✧ On-Chip Temperature Sensor
 - ✧ Three General-Purpose Outputs
 - ✧ Reference Clock with Selectable CMOS and Low Swing Output
 - ✧ PLL Lock-Detect Output Through GPO3
- ◆ Optimized Receiver Performance
 - ✧ Exceptional Receive Sensitivity
 - ✧ High Dynamic Range Sigma-Delta ADCs Allow Simple AGC Implementation with Switched Gain States
- ◆ Optimized Transmitter Performance
 - ✧ Factory Calibrated for Gain, Carrier Leakage, and Sideband Suppression
 - ✧ 10-Bit Gain Control Resolution for Better Power Accuracy
 - ✧ 60dB Gain Control Range
- ◆ Loopback Operating Mode from Tx Baseband Input to Rx Baseband Output
- ◆ MAX-PHY Serial Digital Interface
- ◆ SPI Read/Write Functionality
- ◆ Operation Controlled by 4-Wire Serial Interface
- ◆ Low-Cost 7mm x 7mm TQFN Package

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim's website at www.maximintegrated.com.

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

ABSOLUTE MAXIMUM RATINGS

$V_{CC_}$ to GND_ -0.3V to +3.9V
 $RXIN_$, $MIXIN_$, $LNAOUT_$, to GND_ -0.3V to +1.2V
 All Pins Except $V_{CC_}$ to GND_ -0.3V to ($V_{CC_}$ + 0.3V)
 AC Input Signals 1.0V Peak
 Digital Input Current ± 10 mA
 Maximum VSWR Without Damage 8:1
 Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)
 TQFN Multilayer Board
 (derate 40mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$) 3.2W

Junction Temperature $+150^\circ\text{C}$
 Operating Temperature Range -40°C to $+85^\circ\text{C}$
 Storage Temperature Range -65°C to $+150^\circ\text{C}$
 Lead Temperature (soldering, 10s) $+300^\circ\text{C}$
 Soldering Temperature (reflow) $+260^\circ\text{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

PACKAGE THERMAL CHARACTERISTICS (Note 1)

TQFN

Junction-to-Ambient Thermal Resistance (θ_{JA}) 25°C/W Junction-to-Case Thermal Resistance (θ_{JC}) 1°C/W

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

DC ELECTRICAL CHARACTERISTICS

($V_{CC_} = 3.0\text{V}$ to 3.6V , $T_A = -40$ to $+85^\circ\text{C}$, 50Ω system, $f_{REFIN} = 19.2\text{MHz}$, typical values are at $V_{CC_} = 3.3\text{V}$, $T_A = +25^\circ\text{C}$, unless otherwise noted. Register settings as defined in tables following the specification tables.) (Note 2)

SPEC NO.	PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
DC1a	Supply Voltage	$V_{CC_}$		3.0	3.3	3.6	V
DC19	Operating Supply Current WCDMA	$I_{CC_}$	Full-duplex high band		312	410	mA
DC20			Full-duplex low band		290	400	
DC21			RXIN4 monitor		75	100	
DC22			RXIN5 monitor		88	120	
DC23			Tx only high band		227	315	
DC24			Tx only low band		218	315	
DC25			Idle Rx		48		
DC26			Idle Tx		48		
DC3	Operating Supply Current AFC-Only Mode	$I_{CC_}$	AFC DAC and SPI only		175	1000	μA
DC5	Operating Supply Current Reference Buffer Mode	$I_{CC_}$	REFOUT = 500Ω 22pF , all else = off		5.3	7.5	mA
DC6	Operating Supply Current Sleep Mode	$I_{CC_}$	All functions off		14	1000	μA
DC11	Digital Input Logic-High			1.3			V
DC12	Digital Input Logic-Low					0.4	V
DC13	Input Current for Digital Control Pins					10	μA
DC16	GPO Sink Current		$V_{OUT} = 0.35\text{V}$, DOUT_DRV = 01	1.0	1.8		mA
DC17	GPO Source Current		$V_{OUT} = V_{CC_} - 0.3\text{V}$, DOUT_DRV = 01	1.0	1.9		mA

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

AC ELECTRICAL CHARACTERISTICS

(MAX2551 MAX-PHY FPGA evaluation platform, $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, registers set as described in Tables 20–51, $V_{CC_} = 3.0\text{V}$ to 3.6V , $f_{\text{REFIN}} = 19.2\text{MHz}$, all sensitivity levels and blocker levels are antenna referred. Typical values are at $T_A = +25^{\circ}\text{C}$ and mid-band, unless otherwise noted. Tx specifications are referred to the output pin of the chip.) (Note 2)

Band II Duplexer Specifications

(Duplexer between antenna and duplexer loss: 0.3dB (applies to all Rx modes).)

Antenna—Uplink Port (Applies to Uplink WCDMA Rx Mode on RXIN1)

BAND (MHz)	Uplink 1850 to 1910	1 to 1800	1930 to 1995	1980 to 2020	2020 to 2200	2300 to 2500	2500 to 4500	4500 to 12750

Rx SAW FILTER RESPONSE								
BAND (MHz)	Out of Band							
ATTENUATION (dB)	Required minimum attenuation relative to in-band							
	25							

Band II Uplink WCDMA Rx Mode on RXIN1 (Full Duplex)

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Wb2fu-0	Frequency Band	WCDMA FDD Band II uplink (lowest to highest channel center frequency)	1852.4		1912.6	MHz
Wb2fu-1	Sensitivity 3GPP TS25.104 Section 7.2.1	Tx on at -27dBm, LNA gain mid gain, PGA gain register set to 9, assumed SNDR > -17.5dB at sensitivity, using UL reference measurement channel (12.2kbps) as specified in A.2 3GPP 25.104, tested by measurement of SNDR at output on CW input signal at -90dBm, SNDR at MAX-PHY filter output established with FFT, LNA linearity set to 0dBm (Note 3)		-118	-107	dBm
Wb2fu-1a	Sensitivity with LNA in High-Gain Mode	Tx on at -27dBm, LNA gain high, PGA gain register set to 6, assumed SNDR > -17.5dB at sensitivity, using UL reference measurement channel (12.2kbps) as specified in A.2 3GPP 25.104, tested by measurement of SNDR at output on CW input signal at -90dBm, SNDR at MAX-PHY filter output established with FFT, LNA linearity set to high		-121	-107	dBm
Wb2fu-3	High-Level EVM WCDMA	$P_{\text{IN}} = -20\text{dBm}$, LNA gain low, PGA gain register set to 1		4.5		%

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

AC ELECTRICAL CHARACTERISTICS

(MAX2551 MAX-PHY FPGA evaluation platform, $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, registers set as described in Tables 20–51, $V_{CC_} = 3.0\text{V}$ to 3.6V , $f_{\text{REFIN}} = 19.2\text{MHz}$, all sensitivity levels and blocker levels are antenna referred. Typical values are at $T_A = +25^{\circ}\text{C}$ and mid-band, unless otherwise noted. Tx specifications are referred to the output pin of the chip.) (Note 2)

Band II Uplink WCDMA Rx Mode on RXIN1 (Full Duplex) (continued)

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Wb2fu-4	Sensitivity with Adjacent Channel Interference 3GPP TS25.104 Section 7.4.1	Tx on at -27dBm; LNA gain high; PGA gain register set to 3; assumed SNDR > -17.5dB at sensitivity; interfering signals at front-end input -28dBm, at 5MHz offset and -5MHz offset and modulated as in 3GPP; using UL reference measurement channel (12.2kbps) as specified in A.2 3GPP 25.104; tested by measurement of SNDR at output on CW input signal at -90dBm; SNDR at MAX-PHY filter output established with FFT (Note 3)		-107	-91	dBm
Wb2fu-5	Sensitivity with In-Band Blocking Interference 3GPP TS25.104 Section 7.5	Tx on at -27dBm; LNA gain high; PGA gain register set to 6; assumed SNDR > -17.5dB at sensitivity; interfering signal at front-end input -30dBm at 1900MHz to 2000MHz min, 10MHz offset modulated as in 3GPP; using UL reference measurement channel (12.2kbps) as specified in A.2 3GPP 25.104; tested by measurement of SNDR at output on CW input signal at -90dBm; (test only worst case in production); SNDR at MAX-PHY filter output established with FFT (Note 3)		-120	-101	dBm
Wb2fu-6	Sensitivity with Out-of-Band Blocking Interference 3GPP TS25.104 Section 7.5.1	Front-end assumed response as above, Tx on at -27dBm, LNA high gain, PGA gain register set to 6, assumed SNDR > -17.5dB at sensitivity, interfering signal at front-end input -15dBm CW, 1MHz to 1830MHz and 1930MHz to 2750MHz with 1 MHz steps, no exceptions allowed, (test only worst case in production), using UL reference measurement channel (12.2kbps) as specified in A.2 3GPP 25.104, tested by measurement of SNDR at output on CW input signal at -90dBm, SNDR at MAX-PHY filter output established with FFT (Note 3)		-116	-101	dBm

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

AC ELECTRICAL CHARACTERISTICS (continued)

(MAX2551 MAX-PHY FPGA evaluation platform, $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, registers set as described in Tables 20–51, $V_{CC_} = 3.0\text{V}$ to 3.6V , $f_{\text{REFIN}} = 19.2\text{MHz}$, all sensitivity levels and blocker levels are antenna referred. Typical values are at $T_A = +25^{\circ}\text{C}$ and mid-band, unless otherwise noted. Tx specifications are referred to the output pin of the chip.) (Note 2)

Band II Uplink WCDMA Rx Mode on RXIN1 (Full Duplex) (continued)

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Wb2fu-8	Sensitivity with Intermodulation Interference 3GPP TS25.104 Section 7.6.1	Tx on at -27dBm; LNA gain high; PGA gain register set to 6; assumed SNDR > -17.5dB at sensitivity; interfering signals at front-end input -38dBm, at 10MHz offset (CW) and 20MHz offset (modulated) as in 3GPP; using UL reference measurement channel (12.2kbps) as specified in A.2 3GPP 25.104; tested by measurement of SNDR at output on CW input signal at -90dBm; SNDR at MAX-PHY filter output established with FFT (Note 3)		-118	-101	dBm
Wb2fu-10	Spurious Emissions Out-of-Band 3GPP TS25.104 Section 7.7.1	30MHz to 1GHz, measured in 100kHz BW		-100	-60	dBm
		1GHz to 12.75GHz, measured in 1MHz BW, with the exception of frequencies between 12.5MHz below the first carrier frequency and 12.5MHz above the last carrier frequency used by the BS (Note 3)		-100	-50	
Wb2fu-11	Spurious Emissions in Receive Bands 3GPP TS25.104 Section 7.9.2	Front-end assumed response as above, 1850MHz to 1910MHz (Note 3)		-95	-80	dBm
Wb2fu-12	Conversion Gain High LNA Gain	LNA high gain; PGA gain register set to 6; tested on CW input signal at -90dBm; calculated by subtracting the FE input signal in dBm from the ADC output signal in dBFS at digital filter outputs, includes digital gain to the 16-bit output	23	32	39	dB
Wb2fu-13	Conversion Gain Mid LNA Gain	LNA mid gain; PGA gain register set to 9; tested on CW input signal at -90dBm; calculated by subtracting the FE input signal in dBm from the ADC output signal in dBFS at digital filter outputs, includes digital gain to the 16-bit output	22	30.5	37	dB
Wb2fu-14	Conversion Gain Low LNA Gain	LNA gain low; PGA gain register set to 1; tested on CW input signal at -20dBm; calculated by subtracting the FE input signal in dBm from the ADC output signal in dBFS at digital filter outputs, includes digital gain to the 16-bit output	-13.5	-6.5	-3	dB

AC ELECTRICAL CHARACTERISTICS (continued)

(MAX2551 MAX-PHY FPGA evaluation platform, $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, registers set as described in Tables 20–51, $V_{CC_} = 3.0\text{V}$ to 3.6V , $f_{\text{REFIN}} = 19.2\text{MHz}$, all sensitivity levels and blocker levels are antenna referred. Typical values are at $T_A = +25^{\circ}\text{C}$ and mid-band, unless otherwise noted. Tx specifications are referred to the output pin of the chip.) (Note 2)

PCS Band GMSK Rx Mode

The signal shares the same path as WCDMA Band II downlink. Losses applied are:

- 1) Diplexer: 0.3dB
- 2) Band II duplexer, antenna to downlink port (same as WCDMA table)
- 3) SPDT: 0.3dB

PCS Band Rx Mode on RXIN5

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
pcs-0	RF Frequency		1930.2		1994.8	MHz
pcs-1	Sensitivity 3GPP TS100.910 Section 6.2	LNA gain high, PGA gain register set to 12, assumed SNDR > 7dB at sensitivity, using static E-TCH/F as specified in 3GPP TS 100.910, tested by measurement of SNDR at ADC output on CW input signal at -102dBm, SNDR at MAX-PHY filter output established with FFT		-108		dBm

Band V Duplexer Specifications

Antenna—Uplink Port (Applies to Uplink WCDMA Rx Mode on RXIN3)

Band V Downlink WCDMA Rx Mode on RXIN4 (Monitor)

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Wb5fd-0	Frequency Band		867.4		891.6	MHz
Wb5fd-1	Sensitivity 3GPP TS25.101 Section 7.3.1	LNA gain high, PGA gain register set to 11, assumed SNDR > -7dB at sensitivity, using UL reference measurement channel (12.2kbps) as specified in C.3.1 3GPP 25.101, tested by measurement of SNDR at output on CW input signal at -90dBm, SNDR at MAX-PHY filter output established with FFT, LNA linearity set to 0dBm, specified data is for a manual built fcLGA using 2.7pF filter caps		-111.5	-104.7	dBm
Wb5fd-4	Sensitivity with Adjacent Channel Interference 3GPP TS25.101 Section 7.5.1	LNA gain high; PGA gain register set to 11; assumed SNDR > -7dB at sensitivity; interfering signals at front-end input -52dBm, at 5MHz offset and -5MHz offset and modulated as in 3GPP; using UL reference measurement channel (12.2kbps) as specified in C.3.1 3GPP 25.101; tested by measurement of SNDR at output on CW input signal at -90dBm; SNDR at MAX-PHY filter output established with FFT		-111		dBm

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

AC ELECTRICAL CHARACTERISTICS (continued)

(MAX2551 MAX-PHY FPGA evaluation platform, $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, registers set as described in Tables 20–51, $V_{CC_} = 3.0\text{V}$ to 3.6V , $f_{\text{REFIN}} = 19.2\text{MHz}$, all sensitivity levels and blocker levels are antenna referred. Typical values are at $T_A = +25^{\circ}\text{C}$ and mid-band, unless otherwise noted. Tx specifications are referred to the output pin of the chip.) (Note 2)

Band V Downlink WCDMA Rx Mode on RXIN4 (Monitor) (continued)

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Wb5fd-9	Spurious Emissions Out-of-Band 3GPP TS25.101 Section 7.9.1 (Note 3)	30MHz to 1000MHz, 100kHz bandwidth		-100	-60	dBm
		1000MHz to 12750MHz, 1MHz bandwidth		-98	-50	
Wb5fd-10	Spurious Emissions in Receive Bands 3GPP TS25.101 Section 7.9.2	Front-end assumed response as above, 824MHz to 849MHz and 869MHz to 894MHz (Note 3)		-95	-80	dBm
Wb5fd-11	Conversion Gain High LNA Gain	LNA gain high; PGA gain register set to 11; tested on CW input signal at -90dBm; calculated by subtracting the FE input signal in dBm from the ADC output signal in dBFS at digital filter outputs, includes digital gain to the 16-bit output	40	45	48	dB
Wb5fd-12	Conversion Gain Low LNA Gain	LNA gain low; PGA gain register set to 0; tested on CW input signal at -20dBm; calculated by subtracting the FE input signal in dBm from the ADC output signal in dBFS at digital filter outputs, includes digital gain to the 16-bit output	-17.5	-13.5	-8.5	dB

GSM850 Band Rx Mode

The signal shares the same path as WCDMA Band V downlink. Losses applied are:

- 1) Diplexer: 0.3dB
- 2) Band V duplexer, antenna to downlink port (same as WCDMA table)
- 3) SPDT: 0.3dB

GSM850 Band GMSK Monitor on RXIN4

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
G850-0	RF Frequency		865.2		893.8	MHz
G850-1	Sensitivity 3GPP TS100.910 Section 6.2	LNA gain high, PGA gain register set to 12, assumed SNDR > 7dB at sensitivity (GSM), using static E-TCH/F as specified in 3GPP TS 100.910, tested by measurement of SNDR at output on CW input signal at -102dBm, SNDR at MAX-PHY filter output established with FFT		-110	-104	dBm

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

Tx MODE AC ELECTRICAL CHARACTERISTICS

(MAX2551 MAX-PHY FPGA evaluation platform, $T_A = -40^{\circ}\text{C}$ to $+85^{\circ}\text{C}$, WCDMA downlink TM1 16 channels with -14dBfs peak level into sigma-delta modulator inside baseband chip (see the *Baseband Input Level* section), registers set as described in Tables 20–51, $V_{CC_} = 3.0\text{V}$ to 3.6V , $f_{\text{REFIN}} = 19.2\text{MHz}$, typical values are at $T_A = +25^{\circ}\text{C}$, $V_{CC_} = 3.3\text{V}$, and mid-band, unless otherwise noted. Tx specifications are referred to the output pin of the chip.) (Note 2)

SPEC NO.	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
W1	RF Frequency Range	Center of the WCDMA signal, Band II output (TXOUTH)	1932.4		1992.6	MHz
W1a		Band V output (TXOUTL)	867.4		891.6	MHz
W2	Linear Output Power	$\text{TX_GAIN} = 1023$	0			dBm
W3	Adjacent Channel Power Ratio	Offset frequency = $\pm 5\text{MHz}$ in 3.84MHz BW, $P_{\text{OUT}} = 0\text{dBm}$ (Note 3)		-55	-50	dBc
W4	Alternate Channel Power Ratio	Offset frequency = $\pm 10\text{MHz}$ in 3.84MHz BW, $P_{\text{OUT}} = 0\text{dBm}$ (Note 3)		-70	-60	dBc
W5	Rx Band Noise Power, $P_{\text{OUT}} \leq 0\text{dBm}$	Noise measured at -80MHz offset in 3.84MHz BW, then convert to per Hz, Band II output		-153	-142	dBm/Hz
W5a		Noise measured at -45MHz offset in 3.84MHz BW, then convert to per Hz, Band V output		-152	-142	dBm/Hz
W6	EVM	$P_{\text{OUT}} = 0\text{dBm}$		3.3		%
W6a	RCDE	TM6, 8 channels at 0dBm		-28		dB
W7	Minimum Output Power	$\text{TX_GAIN} = 0$		-61	-50	dBm
W8	Output Power Deviation from $T_A = +25^{\circ}\text{C}$ to -40°C	$\text{TX_GAIN} = 1023$, high band	-0.5	+2	+3.5	dB
		Low band	-1	+0.5	+2.5	
W9	Output Power Deviation from $T_A = +25^{\circ}\text{C}$ to $+85^{\circ}\text{C}$	$\text{TX_GAIN} = 1023$, high band	-4	-2	-1	dB
		Low band	-2.5	-1	0	
W10	Power Control Step Size Accuracy	Five calibration points over the power control range to create four linear regions, any linearly interpolated 1dB TX_GAIN step over the specified power range (W2 and W7) will produce 1dB output power step within this error range.		± 0.25		dB
W11	Power Control Step Size Accuracy	Five calibration points over the power control range to create four linear regions, any linearly interpolated 10dB TX_GAIN step over the specified power range (W2 and W7) will produce 10dB output power step within this error range.		± 0.75		dB

DAC1	Resolution	Monotonicity is production tested		12		Bits
AFC DAC						
DAC3	Output-Voltage High	Load > 200kΩ to GND, AFCDAC = all 1	2.55	2.68		V
DAC4	Output-Voltage Low	Load > 200kΩ to VCC_, AFCDAC = all 0		0.37	0.45	V
DAC5	Output Noise	Any code within 0.5V to 2.5V output level, 100Hz to 20kHz		6		μV/rtHz
DAC6	Settling Time	Step from 0.6V to 2V, settling to ±10mV				μs
DIGITAL TEMPERATURE SENSOR						
T1	Output Code vs. Temperature	TA = -40°C		5		%code
T2		TA = +25°C		17		
T3		TA = +85°C		27		
T5		Code Slope	TA = -20°C to +70°C		5	
ISOLATION						
M1	RXIN_ Pin-to-Pin Isolation	Between any RXIN_ pins, with one of the two ports disabled		30		dB
M2	TXOUT_ to RXIN_ Isolation	Between any TXOUT and RXIN_, with both ports on		60		dB

Note 2: Production tested at $T_A = +25^{\circ}\text{C}$. Cold and hot are guaranteed by design and characterization.

Note 3: Guaranteed by design and characterization.

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

General Comments

MAX-PHY

MAX-PHY is Maxim's solution for the digital interface system between the radio IC and the baseband/DSP. It is a multimode, software programmable, digital signal post-processing engine that processes the data out of the radio IC and produces the digital filtered outputs for use in the DSP. It enables multimode operation of the radio through software control. Maxim offers an evaluation kit for the MAX2551 along with an FPGA-based MAX-PHY evaluation platform. The FPGA includes the recommended digital channel-selection filters. The Verilog code for these filters is also available for integration into the DSP. Contact Maxim for further information.

Additional Information

The specifications in the following pages calculate sensitivity with a specified front-end loss from a measured signal-to-noise and distortion ratio (SNDR) and an assumed minimum output SNDR_{SENS} needed for demodulation at sensitivity. The sensitivity values can be related to noise figure by the formula:

$$\text{Noise Figure of MAX2551 (dB)} = \text{Sensitivity (dBm)} - \text{Front-End Loss (dB)} - \text{SNDR}_{\text{SENS}} \text{ (dB)} + 174 \text{ dBm/Hz} - 10 \times \text{LOG}(\text{bandwidth in Hz})$$

Low-noise amplifier (LNA) and programmable-gain amplifier (PGA) gain are set according to the Conditions column in the *Electrical Characteristics* table. The output SNDR is measured using MAX-PHY and the bandwidth of the measurement is defined by the digital filters in MAX-PHY. DC at the output is excluded from the SNDR measurement. SNDR is calculated using an FFT of the output bytes with a typical FFT length of 2¹⁴ output samples.

Typical Operating Characteristics

(MAX2551 EV kit and MAX-PHY FPGA evaluation platform, T_A = +25°C, unless otherwise noted. Registers set as described in Tables 20 and 21, V_{CC_} = 3.3V, f_{REFIN} = 19.2MHz, all sensitivity levels and blocker levels are antenna referred.)

Pin Configuration

Pin Description

PIN	NAME	FUNCTION
1	TXOUTL	Low-Band TXRF Output. Internally matched to 50Ω over the band of operation.
2	GND_TXL	Tx Ground. Connect directly to ground plane.
3	TXOUTH	High-Band TXRF Output. Internally matched to 50Ω over the band of operation.
4	GND_TXH	High-Band Tx Output Ground. Connect directly to ground plane.
5	DIN	Data Input of the 4-Wire Serial Interface
6	TXINI+	Transmitter Noninverting In-Phase Input. Accepts baseband sigma-delta modulated digital bit streams. Connect directly to the baseband processor.
7	TXINI-	Transmitter Inverting In-Phase Input. Accepts baseband sigma-delta modulated digital bit streams. Connect directly to the baseband processor.

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

Pin Description (continued)

PIN	NAME	FUNCTION
8	TXINQ+	Transmitter Noninverting Quadrature Input. Accepts baseband sigma-delta modulated digital bit streams. Connect directly to the baseband processor.
9	TXINQ-	Transmitter Inverting Quadrature Input. Accepts baseband sigma-delta modulated digital bit streams. Connect directly to the baseband processor.
10	V _{CC_TXBB}	Baseband Tx Path Supply. Connect to a regulated supply voltage. Bypass each supply to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
11	CPOUT_TX	Charge-Pump Output for Tx Synthesizer. Also used as the tuning voltage for Tx VCO. Connect to an external loop filter.
12	V _{CC_TXPLL}	Tx Synthesizer Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
13	REFOUT	Reference Clock Buffer Output. Configurable by the REFEN pin and SPI. See the <i>REFOUT Functionality</i> section for details.
14	V _{CC_REF}	Reference Buffer Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
15	REFIN	Reference Input Pin. Connected to TCXO. Requires a DC-blocking capacitor (1nF).
16	BYPASS_TX	Tx VCO Bias Bypass. Bypass to ground with a 470nF capacitor as close as possible to the pin.
17	GND_TXVCO	Tx VCO Ground. Connect to the PCB ground plane with a separate via.
18	V _{CC_TXVCO}	Tx VCO Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
19	AFC_OUT	AFC DAC Output. The DAC is controlled by the register TXLO_AFCDAC (Table 43).
20	RXOUTI+	Receiver Noninverting In-Phase Output. Digital sigma-delta modulated LVDS output. Connect directly to the baseband processor.
21	RXOUTI-	Receiver Inverting In-Phase Output. Digital sigma-delta modulated LVDS output. Connect directly to the baseband processor.
22	RXOUTQ+	Receiver Noninverting Quadrature Output. Digital sigma-delta modulated LVDS output. Connect directly to the baseband processor.
23	RXOUTQ-	Receiver Inverting Quadrature Output. Digital sigma-delta modulated LVDS output. Connect directly to the baseband processor.
24	V _{CC_RXBB}	Baseband Rx Path Supply. Regulated Power-Supply Input. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
25, 44	N.C.	Leave Unconnected
26	V _{CC_CLKVCO}	Clock Generation VCO Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

Pin Description (continued)

PIN	NAME	FUNCTION
27	GND_CLKVCO	Clock Generation Synthesizer Ground. Connect clock generation synthesizer ground to the PCB ground plane with a separate via.
28	V _{CC} _CLKPLL	Clock Generation Synthesizer Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
29	SCLK	SPI Interface Clock Input. Data is clocked in to the serial data input on the rising edge of SCLK. See Figure 4 for details.
30	V _{CC} _RXPLL	Rx Synthesizer Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
31	CPOUT_RX	Rx Synthesizer Charge Pump Output. Also used as the tuning voltage for Rx VCO. Connect to an external loop filter.
32	BYPASS_RX	Rx VCO Bias Bypass. Bypass to ground with a 470nF capacitor as close as possible to the pin.
33	GND_RXVCO	Rx VCO Ground. Connect ground to the PCB ground plane with a separate via.
34	V _{CC} _RXVCO	Rx VCO Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
35	DOUT	SPI Data Output
36	V _{CC} _MXR	Rx Mixer Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
37	MIXINH	High-Band Rx Mixer Input. RF input to mixer from an external filter (optional). Internally DC-blocked and matched to 50Ω.
38	MININL	Low-Band Rx Mixer Input. RF input to mixer from an external filter (optional). Internally DC-blocked and matched to 50Ω.
39	GPO3	General-Purpose Output. Controlled by register 7 (Table 20). GPO3 can also be configure as a PLL lock-detect output.
40	V _{CC} _LNA	LNA Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
41	LNAOUTL	Low-Band LNA Output. RF output from LNA 3 to external SAW filter. Internally DC-blocked and matched to 50Ω.
42	LNAOUTH	High-Band LNA Output. RF Output from LNA 1 to an external SAW filter. Internally DC-blocked and matched to 50Ω.
43	REFEN	Configuration for REFOUT. When REFEN = 0, REFOUT can be configured for CMOS or low-voltage output by the SPI interface (see the <i>REFOUT Functionality</i> section). When REFEN = 1, REFOUT is configured as REFIN buffer with CMOS output.
45	GND_LNAP	PCS LNA Ground. Connect directly to ground plane.
46	RXIN1	Low-Noise Amplifier Input 1. Requires AC-coupling and external matching.
47	GPO2	General-Purpose Output. Controlled by register 7<3:2>.

Pin Description (continued)

PIN	NAME	FUNCTION
48	RXIN3	Low-Noise Amplifier Input 3. Requires AC-coupling and external matching.
49	GND_LNAC	Ground for Cellular LNA. Connect directly to the ground plane.
50	RXIN4	Low-Noise Amplifier Input 4. Requires AC-coupling and external matching.
51	GND_LNAI	IMT LNA Ground. Connect directly to the ground plane.
52	RXIN5	Low-Noise Amplifier Input 5. Requires AC-coupling and external matching.
53	GPO1	General-Purpose Output. Controlled by register 23<25:24>.
54	$\overline{CS}$	Serial-Interface Chip Select. See Figure 4.
55	V _{CC_TXRF}	Tx Upconverter Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
56	V _{CC_PAD}	PA Driver Supply. Connect to a regulated supply voltage. Bypass each supply pin to the PCB ground plane with a capacitor placed as close as possible to the pin. Do not share ground vias among multiple bypass capacitors.
—	EP	Exposed Pad. Connect to a large ground plane to maximize thermal performance.

Detailed Description

Quad RF Inputs

The MAX2551 features four independent RF inputs. RXIN1 and RXIN3 are used for receiving WCDMA Band II/Band V. Band II and Band V WCDMA/PCS downlink can be monitored (network listen) by programming the part to receive through the RXIN4 and RXIN5 inputs. This allows the base station to monitor surrounding cells to select the best operating conditions (transmit power, codes, frequency, capacity, etc.)

REFOUT Functionality

The MAX2551 features a reference oscillator buffered output that is configurable by the REFEN input and Register 29. REFOUT can be configured as CMOS or as a low-voltage output. Table 2 lists all REFOUT configurations.

Receiver System Gain Control

The device features programmable-gain LNAs and programmable variable-gain baseband amplifiers, allowing the system gain to be entirely controlled by the serial interface. RX1, RX3, and RX5 have three possible gain states: high gain, medium gain, and low gain. RX4 has

high and low gain modes. The gain state of the LNA in operation is programmed by the LNAGAIN bits in the RX_GAIN[15:14] register. Each LNA requires an external matching network to optimize system sensitivity. Table 3 provides S11 for each LNA input over the specified band of operation, Table 4 provides S11 of RXIN1 and RXIN3 LNA output, and Table 5 provides S11 of the mixer input. The receiver also features a separate dedicated receive path for the 1930MHz to 1995MHz band that enables monitoring.

The baseband amplifiers has 16 possible gain states with each LSB providing a gain step of 3dB. The gain state of the baseband amplifiers is programmed by the PGAGAIN bits in the RX_GAIN[11:8] register. The dynamic range of the data converters when using the recommended sampling rates is sufficient to allow for minimal switching of system gain over varying input signal power. Table 6 and Table 7 provide suggested LNA and PGA settings for various input signal power ranges. Two possible LNA/PGA gain settings are provided for the uplink band. Case 1 (Table 6) allows for 3GPP TS25.104 compliance under all conditions while case 2 (Table 7) allows best sensitivity but compromises adjacent channel selectivity and intermodulation in high-gain LNA mode.

Digital I/Q Receive Interface

The baseband output of the MAX2551 is in the form of a digital I/Q interface. The received signals are sampled by a 1-bit sigma-delta modulator clocked at 153.6MHz for WCDMA and 26MHz for GSMK. The digital bitstream out of the converter is transported from the MAX2551 to the baseband processor by a low-voltage differential signaling (LVDS) interface. The output data is single-bit nonreturn-to-zero (NRZ). The MAX2551 does not perform any encoding of the data and no clock is exchanged between the MAX2551 and the baseband processor.

The MAX2551 performs limited analog filtering only to minimize aliasing; all channel filtering is realized entirely in the digital domain. The digital filtering removes undesired signals as well as the inherent quantization noise of the sigma-delta modulator. In addition, the MAX2551's analog filters include a pole at approximately half the channel bandwidth that must be equalized by the digital filters.

The differential outputs require a termination resistor at the digital baseband IC inputs. The output current of the

LVDS drivers are programmable by the LVDSI_2X bit in the BB_CLKOUT register to accommodate different termination resistors. Set LVDSI_2X = 1 to set the drive current to nominal for operation with 120 Ω differential loads.

Digital I/Q Transmit Interface

The Tx baseband input of the MAX2551 is in the form of a sigma-delta modulated digital I/Q interface. The digital bitstream of the baseband processor is transported to the MAX2551 by a low-voltage differential signaling (LVDS) or DDR3 interface. The LVDS signal has a typical common-mode voltage of 1.2V and a differential swing of 140mV_{P-P}, while DDR3 has a common-mode voltage of 0.75V and differential of 600mV_{P-P}. For LVDS, the input data should be in single-bit NRZ format; no clock is exchanged between the baseband processor and the MAX2551. The MAX2551 recovers the I/Q bitstreams with an on-chip data recovery circuit. The bitstream is converted to an analog signal and filtered prior to upconversion to an RF signal.

MAX2551

Figure 1. Digital Baseband Receiver Interface

Figure 2. Baseband Input Example

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

Baseband Input Level

The MAX2551 baseband input is in digital 1-bit sigma-delta converted format. There are internal 1-bit I/Q DACs that restore the level of the incoming digital signals to a repeatable analog level in the MAX2551. At a given TX_GAIN value, the RMS output power level depends on the density of the bit stream, not the voltage level of the LVDS digital signal. The density of the bit stream, in turn, depends on the input level of the sigma-delta converter, which resides in the baseband chip. The condition for the AC performance in the EC table calls for -4dBFS peak, which means -4dB relative to the full scale of the input of the sigma-delta converter. The sigma-delta converter, coded in Verilog, and implemented on FPGA has 10 bits (9 bits + sign) at the input. In this case, the full scale is ± 511 , and -4dBFS peak means ± 322 peak excursion. The RMS level is lower than this number, depending on the peak-average ratio of the signal. For TM1, the peak-average is 10.6dB at 0.01%, so the RMS level of the baseband signal is -14.6dBFS, or ± 95 .

DC Offset

While the inherent DC offset at the I/Q outputs is very low, it is expected that the baseband processor will digitally remove any DC offset.

Digital Filters/Sigma Delta Modulator

Verilog code is available for implementation of the sigma-delta modulator and digital filters in the baseband processor. Contact the factory for further information.

Fractional-N Synthesizers

The MAX2551 includes three fractional-N frequency synthesizers. One synthesizer is used to generate the receive RF local oscillator (LO), the second is used to generate the transmit RF local oscillator, while the third is used to generate the ADC sampling clock. The loop filter for the ADC sampling clock synthesizer is integrated on-chip. RF synthesizers require an external loop filter. All synthesizers have 20 bits of fractional resolution.

RF Synthesizers

For the receiver the RF LO frequency is programmed by the RXLO_FRAC [19:0] (Fractional) register and the RXLO_SYN[7:0] (Integer) register. The synthesizer frequency is demonstrated by the following example.

Assume:

$$f_{\text{REFIN}} = f_{\text{COMPARISON}} = 19.2\text{MHz}$$

$$f_{\text{LO}} = f_{\text{REFIN}} \times \left(\text{RXLO_SYN} + \frac{\text{RXLO_FRAC}}{2^{20}} \right) \times K$$

where:

K = 1 if RXIN1, RXIN3, RXIN5

K = 0.5 if RXIN4

For the transmitter the RF LO frequency is programmed by the TXLO_FRAC [19:0] (Fractional) register and the TXLO_SYN[7:0] (Integer) register. The synthesizer frequency is demonstrated by the following example.

Assume:

$$f_{\text{REFIN}} = f_{\text{COMPARISON}} = 19.2\text{MHz}$$

$$f_{\text{LO}} = f_{\text{REFIN}} \times \left(\text{TXLO_SYN} + \frac{\text{TXLO_FRAC}}{2^{20}} \right) \times K$$

where:

K = 0.5 for TXOUTL

K = 1 for TXOUTH

Calculate the required divider ratio by dividing the LO frequency by the reference frequency.

$$\text{Divider} = \frac{f_{\text{LO}} \times 2}{f_{\text{COMPARISON}}} = \frac{1910\text{MHz}}{19.2\text{MHz}} = 99.479166$$

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

The integer-N divider is equal to the integer portion of the divider ratio, 99 in this example. Convert the integer-N decimal value to binary and program into the RXLO_SYN bits.

$$\text{Integer-N Divider} = 99 = 0x63 = 0110\ 0011 \rightarrow \text{RXLO_SYN} = 0110\ 0011$$

The fractional-N divider is equal to the fractional portion of the divider ratio, 0.479166 in this example. Convert the fractional portion of the divider to a 20-bit word by multiplying by 2^{20} and rounding to the nearest whole number. Then, convert the result to binary and program the bits into the RXLO_FRAC.

$$\text{Fractional-N Divider} = 0.479166 \times 2^{20} = 502442 = 0x7AAAA \rightarrow \text{RXLO_FRAC} = 0x7AAAA$$

ADC Clock Synthesizer

The sampling clock frequency is controlled by the CINT (BBCLK_SYN[7:0]) and CFRAC (BBCLK_FRAC[19:0]) registers. The sampling clock synthesizer does not need to be repeatedly programmed during normal operation. The sampling clock frequency (f_{ADCCLK}) is 153.6MHz in WCDMA mode and 26MHz in GSM mode. The dynamic range of the converters with this sampling frequency is sufficient to meet all system specifications with very minimal control of the PGA.

Assume:

$$f_{\text{REFIN}} = f_{\text{COMPARISON}} = 19.2\text{MHz}$$

ADC Clock Synthesizer Fractional Frequency Correction

The MAX2551 ADC clock synthesizer uses a 20-bit frequency synthesizer and can be enhanced by a fractional error correction. Parameters PBQY_RATUP and PBQY_RATDN implement the following function.

$$f_{\text{adcclk}} = f_{\text{REFIN}} \times (\text{CINT} + (\text{CFRAC} + \text{PBQY_RATUP} / (\text{PBQY_RATUP} + \text{PBQY_RATDN})) / 2^{20}) \times K$$

$$\text{PBQY_RATUP} / (\text{PBQY_RATUP} + \text{PBQY_RATDN}) = (f_{\text{ADCCLK}} / f_{\text{REFIN}} - \text{CINT}) \times 2^{20} \times K - \text{CFRAC}$$

where:

K = 8 if WCDMA

K = 48 if GSM/PCS/DCS

PBQY_RATUP and PBQY_RATDN should be chosen for the best fit.

This feature can be enabled or disabled through EN_PBQYDIV (REG15<22>). Table 8 shows the PBQY_RATUP and PBQY_RATDN with commonly used crystal oscillator frequencies.

Power-Down Modes

The MAX2551 features multiple power-down modes that can be controlled by hardware or software. Table 9 describes the various power-down modes.

Carrier and Sideband Suppression Optimization

The MAX2551 delivers a typical carrier suppression of -40dBc and a sideband suppression of -45dBc without any external calibration; however, if greater suppression is required, the MAX2551 is capable of overriding the factory settings and accepting manual calibration from the baseband processor.

RF Band Configuration

The MAX2551 has configurable VCO and LO generation to support BC0 and BC1 forward and reverse link operation. In transmit signal path, LC tank is also configurable to optimize performance in both bands. Table 10 shows the key difference in SPI settings.

General-Purpose Outputs

The MAX2551 is equipped with three general-purpose outputs. GPO3 can also be configured as a PLL lock detect for the Rx, Tx or Rx and Tx. See Table 20 for how to properly configure the general-purpose outputs.

Power-On Reset (POR)

Recommended defaults are not guaranteed upon power-up and are provided for reference only. All registers must be written with the proper values no earlier than 100 μ s after power-up. Figure 3 displays the time it takes for Tx/Rx PLL lock detect (GPO3) to become active after power-up and enabling the correct registers for proper operation. All reserved registers should only be written with default values.

Temperature Sensor

An on-chip temperature sensor is enabled by programming RX_ENABLE<14> = 1. To trigger temperature sensor ADC reading, program RX_MISC2<6> from 0 to 1. The ADC acquires the 5-bit logic output in 2 μ s; the temperature sensor needs to be on (RX_ENABLE<14> = 1) to maintain the ADC logic output. To read the 5-bit logic output through the DOUT pin, apply 4-wire SPI readout programming sequence to RX_MISC2<11:7>.

4-Wire Serial Interface

The MAX2551 includes 32 programmable 26-bit registers. The most significant bit (MSB) is the read/write selection bit (R/W in Figure 4). The next 5 bits are register address (A[4:0] in Figure 4). The 26 least significant bits (LSBs) are register data (D[25:0] in Figure 4). Register data is loaded through the 4-wire SPI/MICROWIRE™-compatible serial interface. MSB of data at the DIN pin is shifted in first and is framed by $\overline{CS}$. When $\overline{CS}$ is low, input data is shifted at the rising edge of the clock at the SCLK pin. At $\overline{CS}$ rising edge, the 26-bit data bits are latched into the register selected by the address bits. See Figure 4. There is no power-on SPI register self-reset functionality in the MAX2551; the user must program all register values after power-up. During the read mode, register data selected by address bits is shifted out to the DOUT pin at the falling edges of the clock.

Register and Bit Descriptions (If Applicable)

The operating mode of the MAX2551 is completely controlled by 32 on-chip registers.

Recommended defaults are not guaranteed upon power-up and are provided for reference only. All registers must be written with the proper values no earlier than 10 μ s after power-up (once $V_{CC_}$ is 90% of final value). All reserved registers should only be written with default values.

Table 19. Brief Register Map

REGISTER NO.	REGISTER NAME	ADDRESS	FUNCTION

MAX2551

Band II and V WCDMA Femtocell Transceiver with GSM Monitoring

Applications Information

Layout Considerations

The EV kit and reference design serve as a guide for PCB layout. Keep RF signal lines as short as possible to minimize losses and radiation. Use controlled impedance on

all high-frequency traces. The exposed paddle must be soldered evenly to the board's ground plane for proper operation. Use abundant ground vias between RF traces to minimize undesired coupling. Bypass each $V_{CC_}$ pin to ground with capacitors placed as close as possible to the pin.

Simplified Block Diagram

Ordering Information

PART	BAND	TEMP RANGE	PIN-PACKAGE
MAX2551ETN+	II and V	-40°C to +85°C	56 TQFN

+ Denotes a lead(Pb)-free/RoHS-compliant package.

*EP = Exposed paddle.

Package Information

For the latest package outline information and land patterns (footprints), go to www.maxim-ic.com/packages. Note that a "+", "#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

PACKAGE TYPE	PACKAGE CODE	OUTLINE NO.	LAND PATTERN NO.

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the Electrical Characteristics table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.
