

ANT-5GW-IPW2-NP Outdoor Cellular Sub-6 5G Antenna

The ANT-5GW-IPW2-NP is an outdoor IP67-rated multiband dipole antenna for 5G New Radio, LTE, and cellular IoT (LTE-M, NB-IoT) applications.

The ANT-5GW-IPW2-NP provides a ground plane independent dipole antenna solution which mounts to metallic and non-metallic surfaces. The ANT-5GW-IPW2-NP housing is UV stabilized fiberglass and the antenna connects using an N plug (male pin) connector.

Features

- Performance at 3300 MHz to 3800 MHz
 - VSWR: ≤ 1.9
 - Peak Gain: 0.5 dBi
 - Efficiency: 36%
- Performance at 2496 MHz to 2690 MHz
 - VSWR: ≤ 1.7
 - Peak Gain: 1.5 dBi
 - Efficiency: 40%
- Enhanced heat and chemical resistant UV stabilized fiberglass antenna housing material
- IP67 rated
- N plug (male pin) connector

Applications

- Worldwide 5G/4G/3G/2G
- Cellular IoT: LTE-M (Cat-M1) and NB-IoT
- Private cellular networks
 - Citizens Broadband Radio Service (CBRS)
- 4.9 GHz Public Safety
- Emerging 5G C-Band applications
- Emerging 5G 2.5 GHz EBS applications

Packaging Information

The ANT-5GW-IPW2-NP antenna is packaged in a clear plastic bag. Distribution channels may offer alternative packaging options.

IP (Ingress Protection) Rating

An ingress protection rating (IP rating) refers to the capability of a device to withstand the ingress of dust and/or water under specified conditions. IP rating is typically reserved for marketable product (device) rather than constituent components because design and assembly may affect performance of the device under testing. IP-rated antennas are designed to support the specified level of ingress protection and may be tested in a standalone configuration, however IP testing should be performed on the complete end product to ensure desired performance.

Antenna Orientation

The ANT-5GW-IPW2-NP antenna is characterized in two antenna orientations as shown in Figure 2. The antenna free space orientation characterizes use of an antenna attached to an enclosure-mounted connector which is connected by cable to a printed circuit board. Although the antenna is a dipole not requiring a ground plane for function, characterization with an adjacent ground plane (102 mm x 102 mm) provides insight into antenna performance when attached directly to a connector on a metal enclosure. The two orientations represent the most common end-product use cases.

VSWR

Figure 4 provides the voltage standing wave ratio (VSWR) across the antenna bandwidth. VSWR describes the power reflected from the antenna back to the radio. A lower VSWR value indicates better antenna performance at a given frequency. Reflected power is also shown on the right-side vertical axis as a gauge of the percentage of transmitter power reflected back from the antenna.

Figure 4. ANT-5GW-IPW2-NP VSWR, Free Space

Return Loss

Return loss (Figure 5), represents the loss in power at the antenna due to reflected signals. Like VSWR, a lower return loss value indicates better antenna performance at a given frequency.

Figure 5. ANT-5GW-IPW2-NP Return Loss, Free Space

Peak Gain

The peak gain across the antenna bandwidth is shown in Figure 6. Peak gain represents the maximum antenna input power concentration across 3-dimensional space, and therefore peak performance at a given frequency, but does not consider any directionality in the gain pattern.

Figure 6. ANT-5GW-IPW2-NP Peak Gain, Free Space

Average Gain

Average gain (Figure 7), is the average of all antenna gain in 3-dimensional space at each frequency, providing an indication of overall performance without expressing antenna directionality.

Figure 7. ANT-5GW-IPW2-NP Antenna Average Gain, Free Space

Radiation Efficiency

Radiation efficiency (Figure 8), shows the ratio of power delivered to the antenna relative to the power radiated at the antenna, expressed as a percentage, where a higher percentage indicates better performance at a given frequency.

Figure 8. ANT-5GW-IPW2-NP Antenna Efficiency, Free Space

Radiation Patterns

Radiation patterns provide information about the directionality and 3-dimensional gain performance of the antenna by plotting gain at specific frequencies in three orthogonal planes. Antenna radiation patterns for a free space orientation are shown in Figure 9 using polar plots covering 360 degrees. The antenna graphic at the top of the page provides reference to the plane of the column of plots below it. Note: when viewed with typical PDF viewing software, zooming into radiation patterns is possible to reveal fine detail.
