

DESCRIPTION

The PM202 series of AC-DC switching power supplies in a package of 3 x 5 x 1.5 inches are capable of delivering 200 watts of continuous power at 5.3 CFM forced air cooling or 150 watts at convection cooling. INTERFACE SIGNALS

- PFD:** TTL logic high for normal operation and TTL logic low upon loss of input power. This signal appears at least 1ms prior to V1 output dropping 5% below its nominal value. This signal also provides a minimum delay of 100 ms after V1 is within regulation.
- Inhibit:** Requires an external TTL high level signal to inhibit outputs for standard models

NOTES:

- Suffix "BN1" in model numbers denotes U-bracket form. Change suffix "BN1" to "CN1" for enclosed form with cover and fan assembly, e.g. PM202-14CN1
- 150 W without moving air or 200 W with 5.3 CFM forced air provided by user for "BN1" version, 200 W for "CN1" version with cover and fan assembly. The adequacy of cooling air is judged by the measured core temperature of transformer T1 below 75°C at 25°C ambient, or below 100°C at 50°C ambient.
- Ripple and noise is maximum peak to peak voltage value measured at output within 20 MHz bandwidth, at rated line voltage and output load ranges, and with a 10 µF tantalum capacitor in parallel with a 0.1 µF ceramic capacitor across the output.
- All models may be operated at no-load without damage. At no load, output voltage fluctuates beyond 5% due to the burst-mode operation of the control IC in them for energy saving.
