SDS1000X-E Series

Super Phosphor Oscilloscope

SIGLENT TECHNOLOGIES CO.,LTD

Key Features

🜆 100 MHz, 200 MHz bandwidth models

- Two channel series have one 1 GSa/s ADC, four channel series have two 1 GSa/s ADCs. When all channels are enabled, each channel has a maximum sample rate of 500 MSa/s. When a single channel per ADC is active, it has sample rate of 1 GSa/s
- The newest generation of SPO technology
 - Waveform capture rate up to 100,000 wfm/s (normal mode), and 400,000 wfm/s (sequence mode)
 - Supports 256-level intensity grading and color display modes
 - Record length up to 14 Mpts
 - Digital trigger system
- Intelligent trigger: Edge, Slope, Pulse Width, Window, Runt, Interval, Time out (Dropout), Pattern
- Serial bus triggering and decoding (Standard), supports protocols IIC, SPI, UART, CAN, LIN
- 🚣 Video trigger, supports HDTV
- Low background noise with voltage scales from 500 μV/div to 10 V/div
- 10 types of one-button shortcuts, supports Auto Setup, Default, Cursors, Measure, Roll, History, Display/Persist, Clear Sweep, Zoom and Print
- Segmented acquisition (Sequence) mode, divides the maximum record length into multiple segments (up to 80,000), according to trigger conditions set by the user, with a very small dead time segment to capture the qualifying event.
- History waveform record (History) function, maximum recorded waveform length is 80,000 frames.
- Automatic measurement function for 38 parameters as well as Measurement Statistics, Zoom, Gating, Math, History and Reference functions
- 1 Mpts FFT with Peaks and Markers
- Math and measurement functions use all sampled data points (up to 14 Mpts)
- Math functions (FFT, addition, subtraction, multiplication, division, integration, differential, square root)
- Preset key can be customized for user settings or factory "defaults"
- Security Erase mode
- High Speed hardware based Pass/Fail function
- MSO, 16 digital channels (four channel series only, option)
- Bode plot, Measuring Power Supply Control Loop Response (four-channel series only)
- Version Search and navigate (four channel series only)
- USB AWG module (four channel series only, option)
- USB WIFI adapter (four channel series only, option)
- Web Browser based control (four channel series only)
- Multiple interface types: USB Host, USB Device (USB-TMC), LAN, Pass / Fail, Trigger Out
- J- Supports SCPI remote control commands

SDS1104X-E SDS1204X-E SDS1202X-E

Product overview

SIGLENT's new SDS1000X-E Super Phosphor Oscilloscopes feature two channel and four channel models. The two channel model is available with a 200 MHz analog bandwidth, a single ADC with 1 GSa/s maximum sample rate, and a single memory module with 14 Mpts of sample memory. The four channel scope is available in 100 and 200 MHz models and incorporates two 1 GSa/s ADCs and two 14 Mpts memory modules. When all channels are enabled, each channel has sample rate of 500 MSa/s and a standard record length of 7 Mpts. When only a single channel per ADC is active, the maximum sample rate is 1 GSa/s and the maximum record length is 14 Mpts. For ease-of-use, the most commonly used functions can be accessed with its user-friendly front panel design.

The SDS1000X-E series employs a new generation of SPO (Super-Phosphor Oscilloscope) technology that provides excellent signal fidelity and performance. The system noise is also lower than similar products in the industry. It comes with a minimum vertical input range of 500 uV/div, an innovative digital trigger system with high sensitivity and low jitter, and a waveform capture rate of 400,000 frames/sec (sequence mode). The SDS1000X-E also employs a 256-level intensity grading display function and a color temperature display mode not found in other models in this class. SIGLENT's latest oscilloscope offering supports multiple powerful triggering modes including serial bus triggering. Serial bus decoding for IIC, SPI, UART, CAN, LIN bus types are included. The X-E models also include History waveform recording, and sequential triggering that enable extended waveform recording and analysis. Another powerful addition is the new 1 million points FFT math function that gives the SDS1000X-E very high frequency resolution when observing signal spectra. The new digital design also includes a hardware co-processor that delivers measurements quickly and accurately without slowing acquisition and front-panel response. The features and performance of SIGLENT's new SDS1000X-E cannot be matched anywhere else in this price class.

The four channel series support even more functions, including: searching and navigating, on-screen Bode plot, 16 digital channels (Option), an external USB powered 25 MHz AWG module (Option), a USB WIFI adapter (Option), and an embedded application that allows remote control via web browser.

Models and key Specification

| Serial Trigger and decoder (Standard) | IIC, SPI, UART, CAN, LIN | |
| 16 Digital Channels (four channel series only, option) | Maximum waveform capture rate up to 1 GSa/s, Reco | rd length up to 14 Mpts/CH |
| USB AWG module (four channel series only, option) | One channel, 25 MHz, sample rate of 125 MHz, wave | length of 16 kpts, isolated output (SAG1021I only) |
| Bode plot (four channel series only) | Minimum start frequency of 10 Hz, minimum scan ba MHz (dependent on Oscilloscope and AWG bandwidth | |
| USB WIFI adapter (four channel series only, option) | 802.11b/g/n, WPA-PSK, the adapter must be supplied | by Siglent to ensure working |
| I/O | USB Host, USB Device, LAN, Pass/Fail, Trigger Out, St | ous (Siglent MSO) |
| Probe (Std) | 4 pcs passive probe PP510 | 4/2 pcs passive probe PP215 |
| Display | 7 inch TFT -LCD (800x480) | |
| Weight | Four channel series: Without package 2.6 kg; With pa Two channel series: Without package 2.5 kg; With pa | 5 5 |

Function & Characteristics

7 inch TFT-LCD display and 10 one-button menus

• 7 -inch TFT -LCD display with 800 * 480 resolution

• Most commonly used functions are accessible using 10 different one-button operation keys: Auto Setup, Default, Cursor, Measure, Roll, History, Persist, Clear Sweep, Zoom, Print

Function & Characteristics

When all channels are enabled, each channel has a maximum sample rate of 500 MSa/s. When a single channel per pair is active, that channel has sample rate of 1 GSa/s

The four channel series has two 1 GSa/s ADC chips (channel 1 and 2 share one, channel 3 and 4 share another), so that each channel can achieve sample rates up to 500 MSa/s and work on bandwidths of 200 MHz when all channels are enabled.

Using hardware-based Zoom technologies and max record length of up to 14 Mpts, users are able to oversample to capture for longer time periods at higher resolution and use the zoom feature to see more details within each signal.

Waveform Capture Rate up to 400,000 wfm/s

With a waveform capture rate of up to 400,000 wfm/s (sequence mode), the oscilloscope can easily capture the unusual or low-probability events.

256 -Level Intensity Grading and Color Temperature Display

SPO display technology provides fast refresh rates. The resulting intensity-graded trace is brighter for events that occur with more frequency and dims when the events occur with less frequency.

The color temperature display is similar to the intensity-graded trace function, but the trace occurrence is represented by different colors (color "temperature") as opposed to changes in the intensity of one color. Red colors represents the more frequent events, while blue is used to mark points that occur lest frequently.

Serial Bus Decoding Function (Standard)

SDS1000X-E displays the decoding through the events list. Bus protocol information can be quickly and intuitively displayed in a tabular format.

History Waveforms (History) Mode and Segmented Acquisition (Sequence)

Playback the latest triggered events using the history function. Segmented memory collection will store trigger events into multiple (Up to 80,000) memory segments, each segment will store triggered waveforms and timestamp of each frame.

Irue measurement to 14 M points

SDS1004X-E can measure all sampled data points up to 14 Mpts. This ensures the accuracy of measurements while the math co-processor decreases measurement time and increases ease-of-use.

I M point used to calculate the FFT

The new math co-processor enables FFT analysis of incoming signals using up to 1 M samples per waveform. This provides high frequency resolution with a fast refresh rate. The FFT function also supports Peaks, Markers, a variety of numbers, a variety of window functions so that it can adapt to different spectrum measurement needs.

Gate and Zoom Measurement

Through Gate and Zoom measurement, the user can specify an arbitrary interval of waveform data analysis and statistics. This helps avoid measurement errors that can be caused by invalid or extraneous data, greatly enhancing the measurements' validity and flexibility.

Hardware-Based High Speed Pass/ Fail function

The SDS1000X-E utilizes a hardware-based Pass/Fail function, performing up to 40,000 Pass / Fail decisions each second. Easily generate user defined test templates provide trace mask comparison making it suitable for long-term signal monitoring or automated production line testing.

4 Customizable Default Key

The current parameters of the oscilloscope can be preset to Default Key through the Save menu.

16 Digital Channels/MSO (four channel series only, option)

16 digital channels enables users to acquire and trigger on the waveforms then analyze the pattern, simultaneously with one instrument.

Search and Navigate (four channel series only)

The SDS1000X-E can search events specified by the user in a frame. It can also navigate by time (delay position) and historical frames.

Bode Plot (four channel series only)

SDS1000X-E can control the USB AWG module or control an independent SIGLENT SDG instrument, scan a devices amplitude and phase frequency response, and display the data as a Bode Plot. There is also a Vari-level Mode for accurately measuring Power Supply Control Loop Response (PSRR). It can also show the result lists, and export the data to a USB disk.

SIGLENT See M 100ms/Delay0.00 250.04/ Hurd Added a low A lo

USB WIFI Adapter (four channel series only, option)

WiFi control of instrumentation can provide a convenient and safe method of configuring and collecting data. This new feature works with a SIGLENT approved WiFi adapter to provide wireless control and communications with SIGLENT 4 channel scopes. The adapter must be supplied by Siglent to ensure working. USB 25 MHz AWG Module (four channel series only, option)

The four channel series supports a USB 25 MHz function/arbitrary waveform generator that is operated from the USB host connection. Functions include Sine, Square, Ramp, Pulse, Noise, DC and 45 built-in waveforms. The arbitrary waveforms can be accessed and edited by the SIGLENT EasyWave PC software.

Complete Connectivity

Back panel of the four channel series

SDS1000X -E supports USB Host, USB Device (USB -TMC), LAN(VXI -11), Pass/Fail and Trigger Out

Back panel of the two channel series

Web control (four channel series only)

With the new embedded web server, users can control the 4 channel scopes from a simple web page. This provides wonderful remote troubleshooting and monitoring capabilities.

Specifications

| Acquire System | |
|------------------------|---|
| Sampling Rate | 1 GSa/s (single channel/pair), 500 MSa/s (two channels/pair) |
| Memory Depth | Max 14 Mpts/Ch (single channel/pair), 7 Mpts/Ch (two channels/pair) |
| Peak Detect | 2 ns (Four channel series) |
| | 4 ns (Two channel series) |
| Average | Averages:4, 16, 32, 64, 128, 256, 512, 1024 |
| Eres | Enhance bits:0.5, 1.5, 2, 2.5, 3 |
| Waveform interpolation | Sin(x)/x, Linear |

| Measurement | | |
|------------------------|---|---|
| Source | All channels, A | All channels in Zoom, Math, All References, History |
| Number of Measurements | Display 4 measurements at the same time . 5 measurements displayed in statistics table. | |
| Measurement Range | Screen region | , Gate region |
| Measurement Paramete | rs (38 Types |) |
| | Max | Highest value in input waveform |
| | Min | Lowest value in input waveform |
| | Pk-Pk | Difference between maximum and minimum data values |
| | Ampl | Difference between top and base in a bimodal signal, or between max and min in an unimodal signal |
| | Тор | Value of most probable higher state in a bimodal waveform |
| | Base | Value of most probable lower state in a bimodal waveform |
| | Mean | Average of all data values |
| | Cmean | Average of data values in the first cycle |
| Vertical (Voltage) | Stdev | Standard deviation of all data values |
| | Cstd | Standard deviation of all data values in the first cycle |
| | VRMS | Root mean square of all data values |
| | Crms | Root mean square of all data values in the first cycle |
| | FOV | Overshoot after a falling edge; (base-min)/Amplitude |
| | FPRE | Overshoot before a falling edge; (max-top)/Amplitude |
| | ROV | Overshoot after a rising edge; (max-top)/Amplitude |
| | RPRE | Overshoot before a rising edge; (base-min)/Amplitude |
| | Level@X | the voltage value of the trigger point |
| | Period | Time between the middle threshold points of two consecutive, like-polarity edges |
| | Freq | Reciprocal of period |
| | +Wid | Time difference between the 50% threshold of a rising edge to the 50% threshold of the next falling edge of the pulse |
| | -Wid | Time difference between the 50% threshold of a falling edge to the 50% threshold of the next rising edge of the pulse |
| | Rise Time | Duration of rising edge from 10-90% |
| Horizontal (Time) | Fall Time | Duration of falling edge from 90-10% |
| | Bwid | Time from the first rising edge to the last falling edge, or the first falling edge to the last rising edge at the 50% crossing |
| | +Dut | Ratio of positive width to period |
| | -Dut | Ratio of negative width to period |
| | Delay | Time from the trigger to the first transition at the 50% crossing |
| | Time@Level | Time from the trigger to each rising edge at the 50% crossing. When Statistics is Off, it shows the time from the trigger to the last rising edge at the 50% crossing. When Statistics is On, it shows the Current, Mean, Min, Max, Standard Deviation of time from the trigger to each rising edge at the 50% crossing in multiple frames (number = Count). |
| | Phase | Phase difference between two edges |
| | FRR | Time from the first rising edge of channel A to the following first rising edge of channel B |
| | FRF | Time from the first rising edge of channel A to the following first falling edge of channel B |
| | FFR | Time from the first falling edge of channel A to the following first rising edge of channel B |
| | FFF | Time from the first falling edge of channel A to the following first falling edge of channel B |
| Delay | LRR | Time from the first rising edge of channel A to the last rising edge of channel B |
| | LRF | Time from the first rising edge of channel A to the last falling edge of channel B |
| | LFR | Time from the first falling edge of channel A to the last rising edge of channel B |
| | LFF | Time from the first falling edge of channel A to the last falling edge of channel B |
| | Skew | Time of source A edge minus time of nearest source B edge |
| | | |

Probes and Accessories

| Probe | Model | Picture | Description |
|--------------------|-----------|---|---|
| Passive | PP510 | | Bandwidth: 100 MHz, 1X/10X, 1M/10 Mohm,300 V/600 V |
| | PP215 | | Bandwidth: 200 MHz, 1X/10X, 1M/10 Mohm, 300 V/600 V |
| | CP4020 | | Bandwidth: 100 KHz, Max. continuous current: 20 Arms, Peak current: 60 A Switch Ratio: 50 mV/A, 5 mV/A, Accuracy: 50 mV/A (0.4 A-10 Apk) \pm 2%, 5 mV/A (1 A-60 Apk) \pm 2%, 9 V battery source |
| | CP4050 | | Bandwidth: 1 MHz, Max. continuous current: 50 Arms, Peak current: 140 A Switch Ratio: 500 mV/A, 50 mV/A Accuracy: 500 mV/A (20 mA-14 ApK) \pm 3% \pm 20 mA , 50 mV/A (200 mA- 100 ApK) \pm 4% \pm 200 mA, 50 mV/A (100 A-140 ApK) \pm 15% max, 9V battery source |
| | CP4070 | | Bandwidth: 150 KHz, Max. continuous current: 70 Arms, Peak current: 200 A Switch Ratio: 50 mV/A, 5 mV/A, Accuracy: 50 mV/A (0.4 A-10 ApK) \pm 2%, 5 mV/A (1 A-200 ApK) \pm 2%, 9V battery source |
| Current Probe | CP4070A S | Bandwidth: 300 KHz, Max. continuous current: 70 Arms, Peak current: 200 A Switch Ratio: 100 mV/A, 10 mV/A, Accuracy: 100 mV/A (50 m A-10 ApK) \pm 3% \pm 50 mA , 10 mV/A (500 mA-40 ApK) \pm 4% \pm 50 mA, 10 mV/A (40 A-200 ApK) \pm 15% max, 9 V battery source | |
| | CP5030 | | Bandwidth: 50 MHz, Max. continuous current: 30 Arms, Peak current: 50 A Switch Ratio: 100 mV/A, 1 V/A, Accuracy: 1 V/A (\pm 1% \pm 1 mA), 100 mV/A (\pm 1% \pm 10 mA), DC 12 V/ 1.2 A power adapter |
| | CP5030A | | Bandwidth: 100 MHz, Max. continuous current: 30 Arms, Peak current: 50 A Switch Ratio: 100 mV/A, 1 V/A, Accuracy: 1 V/A (\pm 1% \pm 1 mA), 100 mV/A (\pm 1% \pm 10 mA), DC 12V/1.2A power adapter |
| | CP5150 | | Bandwidth: 12 MHz, Max. continuous current: 150 Arms, Peak current: 300 A Switch Ratio: 100 mV/A, 10 mV/A, Accuracy: 100 mV/A (\pm 1% \pm 10 mA), 10 mV/A (\pm 1% \pm 100 mA), DC 12 V/1.2 A power adapter |
| | CP5500 | | Bandwidth: 5 MHz, Max. continuous current: 500 Arms, Peak current: 750 A Switch Ratio: 100 mV/A, 10 mV/A, Accuracy: 100 mV/A (\pm 1% \pm 10 mA), 10 mV/A (\pm 1% \pm 100 mA), DC 12 V/1.2 A power adapter |
| Differential Probe | DPB4080 | | Bandwidth: 50 MHz, Differential Range: 800 V (DC + Peak AC), 100 X/200 X/500 X/1000 X, Accuracy: ±1%, DC 9 V/1 A power adapter |

| Probe | Model | Picture | Description |
|--------------------|----------|---|---|
| | DPB5150 | | Bandwidth: 70 MHz, Differential Range: 1500 V (DC + Peak AC),50 X/500 X Accuracy: ±2%, DC 5 V/1 A USB adapter |
| | DPB5150A | | Bandwidth: 100 MHz, Differential Range: 1500 V (DC + Peak AC), 50X/500X , Accuracy: ±2% DC 5 V/1 A USB adapter |
| Differential Probe | DPB5700 | | Bandwidth: 70 MHz, Differential Range: 7000 V (DC + Peak AC), 100X/1000X , Accuracy: ±2%, DC 5 V/1 A USB adapter |
| | DPB5700A | | Bandwidth: 100 MHz Differential Range: 7000 V (DC + Peak AC), 100X/1000X Accuracy: ±2% DC 5 V/1 A USB adapter |
| High Voltage | HPB4010 | | Bandwidth: 40 MHz Differential Range: DC 10 KV, AC (rms): 7 KV (sine), AC (Vpp): 20 KV (Pulse) 1000X Accuracy: ≤3% |
| Isolated front end | ISFE | | The USB Device interface allows a connection into the GPIB interface. USB-GPIB adapter allows the oscilloscope to easily send and receive commands through the GPIB. USB follows the USB2.0 specification. GPIB follows the IEEE488.2 standard. |
| Demo Board | STB-3 | | Output signals include square waves, sine, AM, fast edge , pulse, PWM, I2C, CAN, LIN etc. Used in teaching and demonstrations. |
| USB AWG Module | SAG1021 | SAG1021 See visual Automatica in autoritation Signal Sector | Output Sine, Square, Ramp, pulse, Noise, DC and 45 built-in waveforms. The arbitrary waveforms can be accessed and edited by the EasyWave PC software |

Super Phosphor Oscilloscope

About SIGLENT

SIGLENT is an international high-tech company, concentrating on R&D, sales, production and services of electronic test & measurement instruments.

SIGLENT first began developing digital oscilloscopes independently in 2002. After more than a decade of continuous development, SIGLENT has extended its product line to include digital oscilloscopes, isolated handheld oscilloscopes, function/arbitrary waveform generators, RF/MW signal generators, spectrum analyzers, vector network analyzers, digital multimeters, DC power supplies, electronic loads and other general purpose test instrumentation. Since its first oscilloscope was launched in 2005, SIGLENT has become the fastest growing manufacturer of digital oscilloscopes. We firmly believe that today SIGLENT is the best value in electronic test & measurement.
