

Drill Stop Kit

Ruland supplies drill stop kits with shaft collar sizes ranging from 1/8" to 1/2" with hex keys.

Description

Ruland supplies drill stop kits with shaft collars made from 1215 lead-free steel with a proprietary black oxide coating. Drill stop kits easily control the depth of drilling. Shaft collar sizes range from 1/8" to 1/2" with the required 3/32", 7/64", and 9/64" hex keys. Hardware is carefully selected and tests beyond ANSI standards for maximum holding power. Ruland marks each shaft collar with the name and bore size for ease of identification. Since drill stop kits are supplied with standard Ruland shaft collars they can be individually ordered in the event a replacement is needed.

Features & Benefits

- Easily controls the depth of drilling
- Clamp style shaft collars do not mar the shaft
- Fits multiple drill bit sizes - 1/8", 3/16", 1/4", 5/16", 3/8", 7/8", 1/2"
- Includes 7 different Collars - [CL-2-F](#), [CL-3-F](#), [CL-4-F](#), [CL-5-F](#), [CL-6-F](#), [CL-7-F](#), and [CL-8-F](#)
- Includes the necessary hex wrenches to securely fasten the shaft collars
