DP3T USB Type C Audio and UART Analog Switch with OVP

Description

The FSA1153 is a bi-directional, low power, high speed USB2.0 Type-C, Audio and UART analog switch with overvoltage protection. It is configured as a Double-Pole, Triple Throw (DP3T) switch. The FSA1153s protection function prevents damage to Type-C USB 2.0 port pins caused by high voltage. It provides a receptacle side OVP function on the USB 2.0 data pins and will turn off the relative switch once the voltage level on DN_L or DP_R exceed the OV threshold. It can withstand up to 20.5 V DC.

Application Information

Over-Voltage Protection

The FSA1153 features over-voltage protection (OVP) on the receptacle side pins DN_L and DP_R which will switch off the internal signal routing path if the input voltage

exceeds the OVP threshold. When an over voltage condition has occurred the switch will open immediately and remain open until the over voltage condition is removed.
